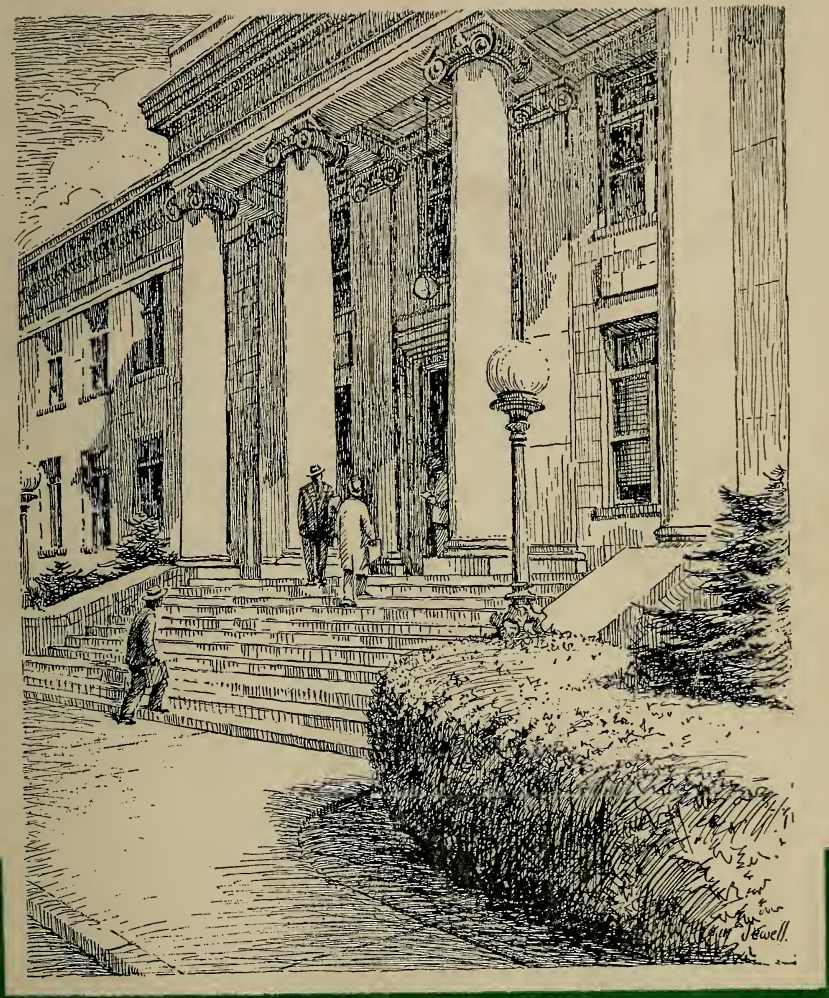
Official Register of Harvard University

VOL. LI JUNE 30, 1954 NUMBER 15



The Harvard School of Public Health

COURSES OF INSTRUCTION FOR THE YEAR 1954–55

OFFICIAL REGISTER OF HARVARD UNIVERSITY

PUBLICATION OFFICE, STRAUS HALL, CAMBRIDGE, MASS.

[*Entered March 6, 1913, at Boston, Mass., as second-class matter, under Act of Congress of August 24, 1912*]

[*Application for re-entry of new frequency schedule now pending*]

Issued at Cambridge Station, Boston, Mass., three times in January, twice in March, four times in April, three times in May, five times in June, twice in July, three times in August, four times in September, twice in October and once in November.

These publications include the report of the president; the general catalogue issue; the announcements of the College and the several professional schools of the University; the courses of instruction; the pamphlets of the several departments; and the like.

PRESIDENT AND FELLOWS OF HARVARD COLLEGE

(This Board is commonly known as the Corporation)

President

Nathan Marsh Pusey, ph.d., ll.d., l.h.d.

Fellows

Charles Allerton Coolidge, a.b., ll.b.
William Luke Marbury, a.b., ll.b.
Richmond Keith Kane, a.b., ll.b.
Thomas S. Lamont, a.b.
Francis Hardon Burr, a.b., ll.b.

Treasurer

Paul Codman Cabot, a.b., m.b.a.

Secretary to the Corporation

David Washburn Bailey, a.b.

BOARD OF OVERSEERS

The President and Treasurer of the University, ex officio, and the following persons by election:

1954 *

Laird Bell, a.b., j.d.
Sinclair Weeks, a.b., ll.d.
Jack Isidor Straus, a.b.
John Nicholas Brown, a.b., a.m., ll.d.
James Lawrence Pool, a.b., m.d., d.m.s.

* The term expires, in each case, on Commencement Day of the year indicated.

1955

William Appleton Lawrence, A.B., B.D., D.D., S.T.D., L.H.D.
Robert Fiske Bradford, A.B., LL.B., LL.D., L.H.D.
John Mason Brown, A.B., L.H.D., LITT.D.
J. Robert Oppenheimer, A.B., S.D., DR.PHIL., LL.D.
William Barry Wood, Jr., A.B., M.D.

1956

Harrison Tweed, A.B., LL.B.
Neil Hosler McElroy, A.B., LL.D.
Christian Archibald Herter, A.B., LL.D.
Robert Cutler, A.B., LL.B., LL.D.
William Lindsay White, A.B.

1957

Arthur Wilson Page, A.B.
Elliott Dunlap Smith, A.B., LL.B., M.A., L.H.D.
Marion Bayard Folsom, A.B., M.B.A., LL.D., D.C.S.
Charles Edward Wyzanski, Jr., A.B., LL.B.
Joseph Wright Alsop, Jr., A.B.

1958

Ralph Lowell, A.B., L.H.D., LL.D.
Frederick Coolidge Crawford, A.B., M.C.E., DR. ENG.
Lawrence Terry
Charles Eustis Bohlen, A.B.
Clarence Douglas Dillon, A.B.

1959

Dexter Perkins, A.B., PH.D., LITT.D.
Thomas D. Cabot, A.B., L.H.D., LL.D.
John W. Hallowell, A.B., M.B.A.
Roy E. Larsen, A.B., L.H.D., LL.D.
Joseph S. Clark, Jr., S.B., LL.D.

David Washburn Bailey, A.B., *Secretary*
Massachusetts Hall, Cambridge.

ADMINISTRATIVE OFFICERS

Nathan Marsh Pusey, ph.d., ll.d., l.h.d.
Office, 1 Massachusetts Hall, Cambridge.

Dean: James Stevens Simmons, s.b., m.d., ph.d., dr.p.h., s.d. (hon.).
Office, School of Public Health, 55 Shattuck Street, Boston.

Assistant Dean: Hugh Rodman Leavell, s.b., m.d., dr.ph.
Office, School of Public Health, 55 Shattuck Street, Boston.

Assistant Dean: John Crayton Snyder, a.b., m.d.
Office, School of Public Health, 695 Huntington Ave., Boston.

Assistant to the Dean: Roger Benham Spaulding, a.b.
Office, School of Public Health, 55 Shattuck Street, Boston.

Secretary of the School: Margaret Guss Barnaby, a.b.
Office, School of Public Health, 55 Shattuck Street, Boston.

Director, Health and Medical Care Program for Students: George Nichols, Jr., m.d.
Office, Peter Bent Brigham Hospital, 721 Huntington Avenue, Boston.

Bursar: Roy Vincelle Perry.
Office, Lehman Hall, Cambridge.

ADMINISTRATIVE BOARD

Nathan M. Pusey, *President* (*ex officio*), James S. Simmons, *Chairman*; Philip Drinker, John E. Gordon, Hugh R. Leavell, Hugo Muench, John C. Snyder, Fredrick J. Stare, Harold C. Stuart, Thomas H. Weller, James L. Whittenberger, Roger B. Spaulding, *Secretary*.

FACULTY OF PUBLIC HEALTH *

Emeritus Professors

ALICE HAMILTON, M.D., A.M. (hon.), S.D. (hon.), *Assistant Professor of Industrial Medicine, Emeritus.*

FREDERICK FULLER RUSSELL, M.D., S.D. (hon.), *Professor of Preventive Medicine and Epidemiology, Emeritus.*

ERNEST EDWARD TYZZER, PH.B., A.M., M.D., S.D. (hon.), *George Fabyan Professor of Comparative Pathology, Emeritus* and *Professor of Tropical Medicine, Emeritus.*

EDWIN BIDWELL WILSON, A.B., PH.D., *Professor of Vital Statistics, Emeritus.*

RICHARD MASON SMITH, A.B., M.D., S.D. (hon.), *Thomas Morgan Rotch Professor of Pediatrics, Emeritus.*

GEORGE CHEEVER SHATTUCK, A.B., M.D., A.M. (hon.), *Clinical Professor of Tropical Medicine, Emeritus.*

MELVILLE CONLEY WHIPPLE, A.M. (hon.), *Associate Professor of Sanitary Chemistry, Emeritus.*

Professors **

JAMES STEVENS SIMMONS, S.B., M.D., PH.D., DR.P.H., S.D. (hon.), *Public Health* (*Dean*).

HUGH RODMAN LEAVELL, S.B., M.D., DR.P.H., *Public Health Practice* (*Assistant Dean*).

JOHN CRAYTON SNYDER, A.B., M.D., *Microbiology* (*Assistant Dean*).

PHILIP DRINKER, S.B., CHEM.E., S.D. (hon.), LL.D., A.M. (hon.), *Industrial Hygiene.*

GORDON MASKEW FAIR, S.B., S.M. (hon.), DR. ING. (hon.), *Sanitary Engineering.*

* Arranged, with the exception of the Deans, in order of appointment to present rank.

** For details of title, see listing under the Department.

JOHN EVERETT GORDON, S.B., PH.D., M.D., A.M. (hon.), F.R.C.P. (Lond.), *Epidemiology.*

HAROLD COE STUART, LITT.B., M.D., A.M. (hon.), *Maternal and Child Health.*

HUGO MUENCH, A.B., M.D., DR.P.H., A.M. (hon.), *Biostatistics.*

FREDRICK JOHN STARE, S.M., PH.D., M.D., A.M. (hon.), *Nutrition.*

CONSTANTIN PRODROMOS YAGLOU, B.A., S.B., M.M.E., A.M. (hon.), *Industrial Hygiene.*

DONALD LESLIE AUGUSTINE, S.B., S.D., S.D. (hon.), A.M. (hon.), *Tropical Public Health.*

JAMES LAVERRE WHITTENBERGER, S.B., M.D., *Physiology.*

THOMAS HUCKLE WELLER, A.B., S.M., M.D., *Tropical Public Health.*

Associate Professors

EDWARD WARREN MOORE, A.M., *Sanitary Engineering.*

FRANZ GOLDMANN, M.D., *Public Health Practice.*

DAVID MARK HEGSTED, S.M., PH.D., *Nutrition.*

LESLIE SILVERMAN, S.D., *Industrial Hygiene.*

LEONID SERGIUS SNEGIREFF, M.D., DR.P.H., *Public Health Practice.*

SHIH LU CHANG, M.D., DR.P.H., *Sanitary Engineering.*

ROSS ARMSTRONG MCFARLAND, A.B., PH.D., S.D. (hon.), *Industrial Hygiene.*

QUENTIN MONROE GEIMAN, S.M., PH.D., *Tropical Public Health.*

EDWARD STEVENSON MURRAY, A.B., M.D., M.P.H., *Microbiology.*

JANE WORCESTER, A.B., DR.P.H., *Biostatistics.*

JOHANNES IPSEN, C.A., C.M., DR.MED., M.P.H., *Microbiology.*

THEODORE HUNT INGALLS, A.B., M.D., *Epidemiology.*

ROBERT BALENTINE REED, PH.D., *Biostatistics.*

STANLEY JAY SARNOFF, A.B., M.D., *Physiology.*

BERTHA SHAPLEY BURKE, A.M., *Maternal and Child Health.*

ELIZABETH PRINCE RICE, A.B., S.M., *Maternal and Child Health.*

Clinical Professor

Samuel Brown Kirkwood, a.b., m.d., *Maternal and Child Health.*

Associate Clinical Professor

Abraham Daniel Rubenstein, a.b., m.d., m.p.h., *Epidemiology.*

Lecturers

Helen Lucile Roberts, a.b., m.d., m.p.h., *Public Health Practice.*
Benjamin David Paul, a.b., ph.d., *Public Health Practice.*

Assistant Professors

Alfred Leo Frechette, m.d., m.p.h., *Public Health Practice.*
Charles Regan Williams, ph.d., *Industrial Hygiene.*
Robert Pershing Geyer, s.m., ph.d., *Nutrition.*
George Vernon Mann, a.b., s.d., m.d., *Nutrition.*
Jean Mayer, b.a., ph.d., d.sc., *Nutrition.*
Norbert Anton Wilhelm, s.b., m.d., *Public Health Practice.*
William Fred Mayes, s.b., m.d., m.p.h., *Public Health Practice.*
(Absent 1954–55)
Robert Brendan O'Connor, a.b., m.d., *Industrial Hygiene.*
Thomas Feger Pugh, m.d., m.p.h., *Epidemiology.*
Martha Fredericka Trulson, s.b., m.p.h., s.d. in hyg., *Nutrition.*
Jere Mead, s.b., m.d., *Physiology.*
Beryl Josephine Roberts, ed.m., m.p.h., *Public Health Practice.*
Margaret Livingston Varley, s.b., m.p.h., *Public Health Practice.*
Benjamin Greeley Ferris, Jr., a.b., m.d., *Physiology.*
Warren Taylor Vaughan, Jr., s.b., m.d., *Public Health Practice.*

Associates

Edward Parish Radford, Jr., m.d., *Physiology.*
Robert Shih-man Chang, s.b., m.d., s.d. in hyg., *Microbiology.*

TEACHING STAFF

Lecturers (Annual appointments)

John Henry Cauley, M.D., M.P.H., *Public Health Practice.*

Frederick William Leopold Richardson, Jr., S.B., PH.D., *Public Health Practice.*

Leon Sternfeld, S.B., M.D., PH.D., M.P.H., *Public Health Practice.* (Absent 1954–55)

Gerald Caplan, B.SC., M.B., CH.B., M.D., *Public Health Practice.*

Claire Frances Ryder, A.B., M.D., M.P.H., *Public Health Practice.*

Willem Steven Frederik, M.D., S.M. IN HYG., *Physiology.*

Alton Stackpole Pope, A.B., M.D., DR.P.H., *Epidemiology.*

Ozzie Gordon Simmons, S.B., PH.D., *Public Health Practice.*

Visiting Lecturers

Leona Baumgartner, PH.D., M.D., S.D. (hon.), *Maternal and Child Health.*

Paul Farr Russell, A.B., M.D., M.P.H., *Tropical Public Health.*

Edward Irving Salisbury, M.D., *Tropical Public Health.*

Fred Lowe Soper, A.B., S.M., M.D., DR.P.H., *Tropical Public Health.*

Justin Meredith Andrews, PH.B., S.D., *Tropical Public Health.*

Herald Rea Cox, A.B., S.D., S.D. (hon.), *Microbiology.*

Geoffrey Edsall, M.D., *Microbiology.*

Francis Brian Carroll, D.M.D., M.D., M.P.H., *Epidemiology.*

Edwin Francis Daily, M.D., *Public Health Practice.*

David Bruce Dill, S.B., PH.D., *Physiology.*

John James Poutas, A.B., M.D., *Epidemiology.*

George Murdoch Saunders, A.B., M.D., *Tropical Public Health.*

Howard Archibald Rusk, A.B., M.D., S.D. (hon.), *Public Health Practice.*

Lewis Wendell Hackett, A.B., M.D., DR.P.H., *Tropical Public Health.*

William Spencer Stone, s.m., m.d., ph.d. (hon.), *Public Health Practice.*

Conrad Wesselhoeft, m.d., *Epidemiology.*

Willard Hull Wright, d.v.m., s.m., ph.d., *Tropical Public Health.*

Austin Ferdinand Henschel, s.b., ph.d., *Physiology.*

Henry van Zile Hyde, a.b., m.d., *Tropical Public Health.*

James Hervi Sterner, s.b., m.d., *Industrial Hygiene.*

Robert Collier Page, a.b., m.d., *Industrial Hygiene.*

Melvin Nathaniel Newquist, a.b., s.b., m.d., *Industrial Hygiene.*

Henry Shepard Fuller, s.b., m.d., m.p.h., *Microbiology.*

Jacques Myer May, m.d., *Tropical Public Health.*

Samuel William Simmons, s.b., ph.d., *Tropical Public Health.*

William Morris Schmidt, s.b., m.d., *Maternal and Child Health.*

Allen Demmy Brandt, s.d., *Industrial Hygiene.*

Richard Henry Daggy, s.m., ph.d., m.p.h., *Microbiology.*

Gilbert Julius Dalldorf, s.b., m.d., *Microbiology.*

William Boris Harris, chem.e., s.m., *Industrial Hygiene.*

Nathan Van Hendricks, s.b., chem.e., *Industrial Hygiene.*

Instructors

Roy F Feemster, a.b., m.d., dr.p.h., *Public Health Practice.*

Herbert Luther Lombard, a.b., m.d., m.p.h., *Public Health Practice.*

Emma Sanborn Tousant, ll.b. *Industrial Hygiene.*

James Addison McComb, d.v.m., *Microbiology.*

John MacIntosh Newell, a.b., s.d., *Microbiology.*

Robert Edmund Archibald, m.d., m.p.h., *Public Health Practice.*

Arthur Edward Burke, s.b., m.d., m.p.h., *Public Health Practice.*

Franklyn Boothroyd Amos, m.d., m.p.h., *Public Health Practice.*

Dean Winn Roberts, a.b., m.d., m.p.h., *Public Health Practice.*

John Cecil Ayres, s.b., m.d., m.p.h., *Epidemiology.*

Reena Roberts Hasker, s.b., a.m., *Nutrition.*

ROBERT GERALD RICE, B.A., B.SC., M.D., C.M., M.P.H., *Maternal and Child Health.*

GEORGE KAHN, S.B., M.D., M.P.H., *Maternal and Child Health.*

ELI CHERNIN, S.B., A.M., S.D., *Tropical Public Health.*

ELIZABETH KINGSBURY CASO, S.M., *Nutrition.*

CLARENCE IRVING STERLING, S.B., *Public Health Practice.*

KENNETH IAIN EACHAINN MACLEOD, M.B.,CH.B., M.P.H., *Public Health Practice.*

ELIZABETH BLANCHARD HAGER, A.B., N.M., A.M., *Public Health Practice.*

BROOKS RYDER, A.B., M.D., M.P.H., *Public Health Practice.*

SIDNEY LISWOOD, A.B., M.B.A., M.P.H., *Public Health Practice.*

OLIVE MAE LOMBARD, B.SC., S.M. IN HYG., *Public Health Practice.*

MADGE LOUISE MYERS, A.B., S.M., *Nutrition.*

JEAN COPELAND AVERY, A.B., M.D., M.P.H., *Public Health Practice.*

ALEXANDER WITKOW, S.B., M.D., M.P.H., *Public Health Practice.*

AMY GREENE, A.B., *Public Health Practice.*

DONALD CHARLES KLEIN, A.B., PH.D., *Public Health Practice.*

ARTHUR CLIFFORD KIMBER HALLOCK, A.B., *Public Health Practice.*

PAULINE GEORGE STITT, M.D., M.P.H., *Maternal and Child Health.*

FRANK LUSK BABBOTT, JR., A.B., M.D., M.P.H., S.M. IN HYG., *Epidemiology.*

FRANCIS PHILLIP DAWSON, M.D., M.P.H., *Public Health Practice.*

MARGARET ELIZABETH DROLETTE, A.B., M.P.H., *Biostatistics.*

MARY LOUISE FOSTER, S.B., A.M., *Public Health Practice.*

MARIAN GERTRUDE MALOON, A.B., ED.M., *Biostatistics.*

EDWARD ALLEN MASON, A.B., M.D., *Public Health Practice.*

HOWARD JOSEPH PARAD, A.B., S.M., *Public Health Practice.*

WILLIAM DAVID SMALL, S.M., *Industrial Hygiene.*

Research Associates

Harben Jay Boutourline-Young, m.b.,b.s., m.d., *Physiology.* (Absent 1954–55)

Ruth Margaret Butler, a.b., s.m., *Maternal and Child Health.*

Joseph John Vitale, s.m., s.d. in hyg., *Nutrition.*

Charles Edward Becker, ph.d., *Tropical Public Health.*

William Hathaway Forbes, dr. phil., m.d., *Physiology.*

Suzanne Taets Van Amerongen, m.a., m.d., *Public Health Practice.*

Hilda Sarver White, s.b., ph.d., *Nutrition.* (Absent 1954–55)

Philip Louis White, s.m., s.d. in hyg., *Nutrition.* (Absent 1954–55)

Hugh Lyon Clements Wilkerson, s.b., m.d., m.p.h., *Epidemiology.*

Pearl Pollack Rosenberg, ph.d., *Public Health Practice.*

Stanley Norton Gershoff, a.b., s.m., ph.d., *Nutrition.*

Stephen Bourne Andrus, s.b., m.d., *Nutrition.*

Charles Edgar Billings, s.m., *Industrial Hygiene.*

Richard Dennis, s.m., *Industrial Hygiene.*

Frank Randolf Philbrook, s.b., m.d., m.p.h., *Epidemiology.*

Carl Ernest Taylor, s.b., m.d., dr.p.h., *Epidemiology.* (Absent 1954–55)

John Benjamin Wyon, b.a., m.b.,b.ch., m.r.c.p., m.p.h., *Epidemiology.* (Absent 1954–55)

Erik Berglund, a.b., m.d., *Physiology.*

Katherine Spencer, ph.d., *Public Health Practice.*

Frederic Russell Olsen, a.b., *Nutrition.*

Lena Marie DiCicco, a.b., s.m., *Public Health Practice.*

Robert Thornton Scholes, s.b., m.d., d.t.m. & h., *Nutrition.*

Naomi Cocke Turner, a.b., ed.m., *Public Health Practice.*

Carlos Collazos, m.d., m.p.h., *Nutrition.* (Absent 1954–55)

Dorothy Dorrian Apple, a.m., *Public Health Practice.*

Robert Brown Case, a.b., s.b., m.d., *Physiology.*

James Allan Davis, s.m., *Public Health Practice.*

CHIA-TUNG PAN, B.SC., M.D., M.P.H., *Tropical Public Health.*

NATESAIER PURSHOTTAM, M.B.,B.S., S.M., M.P.H., *Epidemiology.* (Absent 1954–55)

RUTH HELEN STRUBY TAYLOR, S.B., A.B., M.D., M.P.H., *Epidemiology.*

Research Fellows

DAVID MARTIN ANDERSON, S.B., *Industrial Hygiene.*

SAMUEL DENNIS BELL, JR., A.B., M.D., M.P.H., *Microbiology.*

NEVILLE MONTE LEFCOE, B.SC., M.D., *Physiology.*

THOMAS ROBERT DAVIS, M.B., CH.B., D.T.M. & H., M.P.H., *Nutrition.*

WILLIAM READ SAMPLES, S.B. IN CHEM.E., *Industrial Hygiene.*

NATALIE KUGRIS VALLEE, S.B., ED.D., *Public Health Practice.*

ALEXANDER PAUL HARE, S.B., PH.D., *Public Health Practice.*

JOAN GRIGGS BABBOTT, A.B., M.D., M.P.H., *Epidemiology.*

ISAAC LOUIS BEAUCHAMP, S.B., M.P.H., *Industrial Hygiene.*

HANS GEORG BORST, M.D., *Physiology.*

WILLIAM HADDON, JR., S.B., M.D., *Microbiology.*

Assistants

ALMA ELEANOR AMOROSO, S.B., *Public Health Practice.*

MARJORIE PARSONS, S.B., *Maternal and Child Health.*

FLORENCE EDITH CYR, A.B., S.M., *Maternal and Child Health.*

JULIA AGNES SHEA, A.B., S.M., *Nutrition.*

ELIZABETH OLIVE GRANT, S.B., *Maternal and Child Health.*

MARIE GENEVIEVE MCCONNELL, *Public Health Practice.*

EDWARD HARLAN MICHELSON, S.M., *Tropical Public Health.*

WILLIAM ALFRED BURGESS, S.M., *Industrial Hygiene.*

OLIVE BARBARA HAYES, B.SC., *Nutrition.*

COMMITTEES OF THE FACULTY

Committee on Admissions

Franz Goldmann, *Chairman*; Philip Drinker, Edward S. Murray, Thomas F. Pugh, Martha F. Trulson, John C. Snyder (*ex officio*).

Committee on Degrees

James L. Whittenberger, *Chairman*; Alfred L. Frechette, Quentin M. Geiman, Elizabeth P. Rice, Jane Worcester, Hugh R. Leavell (*ex officio*).

Committee on Curriculum

Harold C. Stuart, *Chairman*; Donald L. Augustine, Jean Mayer, Edward W. Moore, Leslie Silverman, Hugh R. Leavell (*ex officio*).

Committee on Development

George V. Mann, *Chairman*; Robert S. Chang, Shih L. Chang, Quentin M. Geiman, Theodore H. Ingalls, Samuel B. Kirkwood, Ross A. McFarland, Jere Mead, Benjamin D. Paul, Jane Worcester.

AD HOC COMMITTEES

Committee on International Programs

Edward S. Murray, *Chairman*; John E. Gordon, Mark D. Hegsted, Margaret L. Varley, Thomas H. Weller, Hugh R. Leavell (*ex officio*).

Committee on Scholarships

Robert B. Reed, *Chairman*; Robert S. Chang, Theodore H. Ingalls, Leslie Silverman.

Committee on Resources

Roger B. Spaulding, *Chairman*; Ross A. McFarland, Stanley J. Sarnoff, Fredrick J. Stare, Thomas H. Weller, John C. Snyder (*ex officio*).

THE COMMITTEE APPOINTED BY THE BOARD OF OVERSEERS TO VISIT THE SCHOOL OF PUBLIC HEALTH

1953–54

The Honorable Robert F. Bradford, *Chairman* — Boston, Massachusetts
Former Governor of the Commonwealth of Massachusetts
Member of Law Firm, Palmer, Dodge, Gardner & Bradford

S. Bruce Black, *Vice-Chairman* — Boston, Massachusetts
President
Liberty Mutual Insurance Company

Robert Amory — New York, New York
Vice President
Spring Mills, Inc.

C. Francis Beatty — New York, New York
Director
Socony-Vacuum Oil Company, Inc.

T. Roland Berner — New York, New York
Lawyer

The Honorable Thomas D. Cabot — Boston, Massachusetts
President, Godfrey L. Cabot, Inc.

E. H. Carleton, M.D. — East Chicago, Indiana
Medical Director, Inland Steel Company

Paul F. Clark — Boston, Massachusetts
President
John Hancock Mutual Life Insurance Company

C. Douglas Dillon — Paris, France
American Ambassador to France

Martha M. Eliot, M.D. — Washington, D. C.
Chief, Children's Bureau
Federal Security Agency

Ben Hibbs — Philadelphia, Pennsylvania
Editor
The Saturday Evening Post

T. Duckett Jones, M.D. — New York, New York
Medical Director
The Helen Hay Whitney Foundation

Mrs. Albert D. Lasker — New York, New York
President
Albert & Mary Lasker Foundation, Inc.

John L. Loeb — New York, New York
Partner
Carl M. Loeb, Rhoades & Company

John P. Marquand — Newburyport, Massachusetts
Author

F. M. Mayer — Dallas, Texas
President
The Continental Supply Company

Emory W. Morris — Battle Creek, Michigan
President and General Director
W. K. Kellogg Foundation

John W. O'Boyle — Dallas, Texas
Vice President
NEBO Oil Company

James H. Rand — Stamford, Connecticut
President and Chairman of the Board
Remington Rand, Inc.

Roland L. Redmond — New York, New York
Lawyer
Carter, Ledyard & Milburn

Leonard A. Scheele, M.D. — Washington, D. C.
The Surgeon General
U. S. Public Health Service

Henry L. Shattuck — Boston, Massachusetts
Lawyer

R. Glen Spurling, M.D. Louisville, Kentucky
Clinical Professor of Neurosurgery,
University of Louisville School of Medicine

Charles F. Wilinsky, M.D. Boston, Massachusetts
Executive Director (Ret.)
Beth Israel Hospital

Huntington Williams, M.D. Baltimore, Maryland
Commissioner of Health
Baltimore City Health Department

W. Barry Wood, Jr., M.D. St. Louis, Missouri
Professor of Medicine
Washington University, School of Medicine

John S. Zinsser Philadelphia, Pennsylvania
Chairman of the Board
Sharp & Dohme, Inc.

INTRODUCTION

The Harvard School of Public Health is one of the ten institutions in the United States which are accredited centers for postgraduate education in public health. It operates as an independent unit of the University although it is closely associated with the Medical School, the Dental School and the various Harvard hospitals. As a postgraduate institution the School's major objectives include teaching, research and community service in all aspects of modern public health. The curriculum is presented in detail in another section of the Catalogue and it is the purpose of this introduction to indicate in a general way the opportunities for postgraduate training for students who have a background in one or more of the various disciplines which form the basis of public health.

Public health is concerned with maintaining and improving the physical and mental health of the population. It deals with groups of people, communities, or entire populations. In this emphasis on the community as a whole, public health differs from preventive medicine as applied to the individual. Throughout history the need for preventive medicine has been recognized by physicians and laymen alike. When adequate knowledge in the basic sciences finally became available in the past century, rapid progress was made in the direction of maintaining and improving the health of individuals. An early step to meet the need for instruction of medical students in this new field came in 1909 when a separate department of preventive medicine was established in the Harvard Medical School. More recently the concepts of preventive medicine for the individual have been broadened and extended into the new profession of public health. In 1913 Harvard University, acting jointly with the Massachusetts Institute of Technology, established the first American school for health officers, from which, in 1922, Harvard developed its present School of Public Health.

The main objective of the teaching program of the Harvard School of Public Health is to train and develop the leaders who are needed to plan, organize, and operate public health programs for official and

private health agencies, for industries, for the Armed Forces, and for governmental units — local, state, and national. Furthermore, the School instructs various specialists who participate in the operation of health programs, including epidemiologists, microbiologists, biostatisticians, nutritionists, industrial hygienists, and environmental physiologists. Many of its graduates become administrators of important activities in industrial health, maternal and child health, mental health, medical care, control of cancer, tuberculosis, venereal diseases, and tropical diseases. Other graduates become teachers and research workers in this and other schools of public health and in departments of preventive medicine in medical schools.

The major part of the curriculum is devoted to the courses leading to the degree of Master of Public Health which is intended primarily for graduates in medicine, dentistry, veterinary medicine, or allied professions. The courses are also open to students who have satisfactory preparation in the basic medical sciences and who have developed an understanding of community problems by working in a public health field. The work requires one academic year of study, during which the students acquire a clear understanding of the fundamental principles of public health sciences and an appreciation of their application in special fields of work. It also provides an opportunity for concentrated study in one of these special fields with a corresponding mastery of its technics.

For students who do not have an extensive foundation in the basic medical sciences and who have not had experience in public health but are interested in developing competence in some specialty of public health, programs of study are available leading to the degree of Master of Science in Hygiene. These programs provide an opportunity for intensive training in some specific field of public health. Each individual program is designed to fit the student's previous background and his need for further development. An effort is made to emphasize the relation of the student's specialty to public health as a whole.

Physicians who are interested primarily in those aspects of public health which are of particular concern to industry may register at the School for a one year program which leads to the degree of

Master of Industrial Health. This program includes instruction in basic public health sciences but allows time for concentration in subjects of more immediate interest to the physician who is engaged in industrial medicine and health and who must understand the principles of personnel management and of industrial health hazards as well as the clinical aspects of his work.

The programs which lead to the advanced degrees of Doctor of Public Health and of Doctor of Science in Hygiene are based on individual research and the preparation of a thesis embodying an original contribution to knowledge. Candidates for these degrees must have completed the work required for the corresponding master's degrees and must have demonstrated a high degree of competence, scientific ability and imagination.

Subject to limitations of space, the School is prepared to accept a small number of qualified students who are not candidates for degrees, but who are interested in following special programs of various kinds. For example, industrial physicians may arrange a concentrated program of postgraduate training in industrial health during the eight weeks of the third period of the year.

The Harvard School of Public Health is a center of postgraduate education, research, and community service in public health. Its graduates are active in important public health positions over the world. Its research program extends from the basic laboratory sciences to the surrounding communities. Its faculty contributes to the activities of many voluntary, governmental, industrial and military health agencies.

FACILITIES

Most departments of the School of Public Health are housed in two buildings in the same block: one at 55 Shattuck Street, the other at 695 Huntington Avenue, Boston (15). The administrative offices are in the former building. Between the School's two buildings are the Harvard Medical and Dental Schools; the Children's Medical Center is next door, the Peter Bent Brigham Hospital is across the street and the Lying-in Hospital and Vanderbilt Hall are

a block away. The latter is a dormitory for medical students, where students of the School of Public Health may make arrangements to eat.

The facilities of the hospitals and the Harvard Medical School are available to qualified students of this School, and are used in connection with the teaching of various subjects. In addition, students enrolled at the School may take courses in other departments of Harvard University. Students frequently enroll for work in the fields of sociology, public administration, business administration and medical sciences. Certain graduate courses at the Massachusetts Institute of Technology are also open to students of this School.

The Department of Sanitary Engineering of the School is also part of the Division of Applied Science of the Graduate School. The basic course for students of the School of Public Health is taught here, but students may also register for certain special and advanced courses in Sanitary Engineering given in Cambridge.

Of particular interest to students of this School is the close contact with various health agencies in Massachusetts and elsewhere. The divisions of the Massachusetts Department of Public Health not only furnish opportunities for observation and training in their fields, but their staffs enter into the teaching of courses at the School. Administrative methods at local levels may be studied at first hand in the health departments of the cities of Boston, Quincy, Worcester and the Town of Brookline, the directors of which are also faculty members and take active part in course teaching.

There are two special areas for study and training purposes closely linked to the School. The Whittier Street Health Center, a district health unit of the Boston City Health Department, is being developed with the aid of a grant from the Commonwealth Fund and is used not only for purposes of demonstration and training, but also as a field for research in problems of administration, of sociology and of human ecology in general. The other special area includes the territory covered by the Nashoba Associated Boards of Health and the urban community of Leominster, some 30 miles from the School. It furnishes opportunities for the investigation of rural

problems and administrative methods, supplementing those offered by Whittier Street.

The Institute of Laboratories of the Massachusetts Department of Public Health is engaged in a program of general interest, attracting visitors and students from various parts of the United States and from foreign countries. It not only performs a wide variety of standard bacteriological, immunological and chemical procedures, but is actively engaged in several research programs. Its Superintendent is a member of the School's faculty. This close contact with one of the country's outstanding laboratories provides unsurpassed opportunities for qualified students who wish to obtain intensive experience in many types of laboratory methods of particular pertinence to public health.

In general, the location of the Harvard School of Public Health places it in one of the great medical and industrial centers of this country. Clinical subjects, medical care and hospital administration may be studied at first hand. The many large and small industrial organizations permit the observation and investigation of a wide range of problems of industrial hygiene.

Libraries

The joint Library of the School of Public Health and the Harvard Medical School is on the second floor of the Administration Building of the Medical School. It is open from 9 a.m. until 10 p.m. on week days, from 9 a.m. until 5 p.m. on Saturdays, and from 2 p.m. until 6 p.m. on Sundays. There are at present 108,766 volumes, 209,561 pamphlets, and 933 current periodicals on file in this library.

Students also have the privilege of using the College Library in Cambridge, as well as the various departmental libraries belonging to the University, in all of which there are over 4,000,000 volumes and pamphlets.

The Boston Public Library is open to students who are residents of Boston, and to students not residents of Boston who have filed a bond at the Bursar's office.

The Boston Medical Library, No. 8 The Fenway, contains about 207,000 bound volumes, 147,000 pamphlets, and 687 current periodi-

cals on file. For those who desire to consult medical literature, this very valuable library is open on week days from 9 a.m. to 5 p.m., Saturdays 9 a.m. to 1 p.m., and on Mondays and Thursdays until 9 p.m., from the middle of October to the end of May.

COURSES OF STUDY AND DEGREES

Master of Public Health

Requirements for Admission

Students may apply for admission as candidates for the Master of Public Health degree if they are

(1) graduates of approved schools of medicine, dental medicine, veterinary medicine or nursing * *or*

(2) graduates in arts, sciences, or engineering with adequate training in the sciences basic to public health, who
   a. have completed at least one academic year of acceptable graduate study in a public health field, and who
   b. have had a period of acceptable experience in a responsible position in public health practice.

In exceptional circumstances the Administrative Board may admit unusually well qualified applicants in the second category who lack *a* or *b*.

Requirements for the Degree

One academic year must be spent in residence at the University. The student must complete satisfactorily the required and elective courses to a total of 40 credit units. The general course entitled "Ecology: Biological and Social" and the basic courses in Biostatistics, Epidemiology, Public Health Practice, and Sanitary Engineering are required of all students unless they can demonstrate

* Graduates in nursing must (a) have obtained a college degree; (b) have completed their study in public health nursing or its equivalent in an approved University program; (c) have had public health nursing experience, some of which is on a supervisory level.

equivalent preparation. The schedule of courses is shown on pages 90–97.

By the end of the first period each student selects a field of special interest in which approximately one third of the year's work is to be taken. A faculty advisor assists each student in planning his program which is reviewed by the Committee on Degrees.

Upon completion of all required work the student takes a comprehensive examination in which he must demonstrate satisfactorily his ability to coordinate not only the basic subjects, but also various specialties in the field of public health. This examination will be given only at the end of a semester.

Doctor of Public Health

For the degree of Doctor of Public Health the student must complete an approved program of independent and original investigation in a special field and must present the results of this research in an acceptable thesis.

Requirements for Admission

1. An applicant for admission to candidacy for this degree must be either (a) a graduate of an approved school of medicine, dental medicine or veterinary medicine, or (b) the holder of another doctoral degree in one of the basic sciences related to public health. In exceptional cases, an individual lacking a previous doctoral degree may be admitted if he has displayed outstanding ability in previous academic work and in practical public health experience.

2. The applicant must hold the degree of Master of Public Health or its equivalent from a recognized institution and must indicate ability to undertake original investigation in a special field.

Requirements for the Degree

1. The student is required to complete a minimum of two semesters of resident research after he passes the qualifying examination. In exceptional cases the required work for the degree may be completed in this year, although generally, preparation of an acceptable thesis will require a longer period.

2. The candidate must possess a reading knowledge of at least one language, other than English, in which there exists a significant body of literature relevant to the candidate's field of study. The ability to read this language must be demonstrated before the candidate is permitted to take the qualifying examination.

3. After the applicant enters the School, an advisory committee is appointed to review his preparation in the chosen and related fields of study, to pass upon the plan of the proposed thesis, and to determine when the candidate is eligible to take the qualifying examination. This examination is oral, covers the basic public health sciences, and must be passed before the candidate is permitted to proceed with the thesis.

4. The advisory committee continues to supervise the student's research, including the preparation of his thesis.

5. When the advisory committee approves the thesis in draft form, the student then has it typed and bound. Three bound copies of the thesis must be deposited in the Dean's office at least four weeks before the date on which the final examination is to be held. Each copy must be accompanied by a summary not exceeding 1200 words in length, which shall indicate clearly the purposes, methods, and results of the investigation.

6. When the bound copies are received, along with a letter of approval by each member of the advisory committee, the Dean invites two members of any faculty of the University to read the thesis, to report to the Degrees Committee on the acceptability of the thesis, and to participate in the oral examination of the student.

7. If the thesis is accepted, the student is given an oral examination by the faculty. The examination is conducted by the Degrees Committee and covers the thesis as well as those public health subjects to which the thesis is related. Ordinarily this must be accomplished within five years after the qualifying examination is passed.

Master of Science in Hygiene

(With Designation of the Field of Concentration)

This degree is granted on fulfillment of a program of advanced

work in one of the basic disciplines of public health. The courses taken must form an integrated plan of study in one branch of knowledge and allied subjects.

Requirements for Admission

An applicant for this degree must have received an academic degree from an institution of recognized standing, and must be prepared to do work at a graduate level in his field of concentration.

Requirements for the Degree

1. Two academic years of graduate work must be completed, one of which must have been spent in residence. A student with an exceptional record of accomplishment may be able to complete the requirements in less than two academic years. Decision on this point may be made by the Administrative Board at any time after the student completes one semester of residence, upon the recommendations of the Committee on Degrees and the department in which the student has his major interest.

2. The student must complete a program including the general course entitled "Ecology: Biological and Social" as well as the basic courses in Biostatistics and Epidemiology, unless he can demonstrate equivalent preparation. Elective courses must be approved by the Committee on Degrees on the recommendation of the head of the department in which the student wishes to concentrate. All courses in the primary and related fields of interest must be passed with an honor grade.

3. The student must pass with an honor grade a comprehensive examination in his principal and related fields of study. This examination is given after all required work is completed, ordinarily within three years after first enrollment in the School. It will be given only at the end of a semester.

Doctor of Science in Hygiene

(With Designation of the Field of Concentration)

This degree is granted on successful completion of a program of

independent and original research in one of the basic disciplines of public health.

Requirements for Admission

Candidates for the degree of Doctor of Science in Hygiene must have completed work equivalent to that required for the degree of Master of Science in Hygiene and must indicate ability to undertake original investigation in a special field.

Requirements for the Degree

1. The student is required to complete a minimum of two semesters of resident research after he passes the qualifying examination. In exceptional cases the required work for the degree may be completed in this year, although generally, preparation of an acceptable thesis will require a longer period.

2. The candidate must possess a reading knowledge of at least two languages, other than English, in which there exists a significant body of literature relevant to the candidate's field of study. The ability to read this language must be demonstrated before the candidate is permitted to take the qualifying examination.

3. After the applicant enters the School, an advisory committee is appointed to review his preparation in the chosen and related fields of study, to pass upon the plan of the proposed thesis, and to determine when the candidate is eligible to take the qualifying examination. This examination is oral, covers the chosen and related fields of study as well as the course work represented by the Master of Science in Hygiene degree, and must be passed before the candidate is permitted to proceed with the thesis. Students who enroll in the School of Public Health with the intention of becoming doctorate candidates are expected to complete required courses and pass their qualifying examinations within three years, if not sooner, for full-time students, or four years for part-time students.

4. The advisory committee continues to supervise the student's research, including the preparation of his thesis.

5. When the advisory committee approves the thesis in draft form, the student then has it typed and bound. Three bound copies

of the thesis must be deposited in the Dean's Office at least four weeks before the date on which the final examination is to be held. Each copy must be accompanied by a summary not exceeding 1200 words in length, which shall indicate clearly the purpose, methods, and results of the investigation.

6. When the bound copies are received, along with a letter of approval signed by each member of the advisory committee, the Dean invites two members of any faculty of the University to read the thesis, to report to the Degrees Committee on the acceptability of the thesis, and to participate in the oral examination of the student.

7. If the thesis is accepted, the student is given an oral examination by the faculty. The examination is conducted by the Degrees Committee and covers the thesis as well as those public health subjects to which the thesis is related. Ordinarily, this must be accomplished within five years after the qualifying examination is passed.

Master of Industrial Health

The course of training leading to the degree of Master of Industrial Health is designed to meet the increasing need for physicians qualified to plan, organize, and direct health programs for industry and labor.

Requirements for Admission

Candidates for this degree must be graduates of an acceptable school of medicine. Students from the United States should have completed an internship of at least twelve months in a hospital approved by the American Medical Association. While preference will be given to physicians who have had previous experience in industrial practice, the course is open to all qualified physicians.

Requirements for the Degree

1. One academic year, consisting of four eight-week periods, must be spent in residence at the University.

2. The student must complete 40 credit units satisfactorily. All candidates for the degree are expected to take the following courses unless they can demonstrate equivalent preparation:

Industrial Medicine

Basic Problems in Industrial Hygiene
Industrial Medicine
Industrial Medical Clinics
Personnel Administration
Human Problems of Adjustment in Industry

Environmental Hygiene

Environmental Physiology
Principles of Sanitation
Industrial Air Analysis
Hygienic Aspects of Ventilation

Public Health

Ecology: Biological and Social
Principles of Epidemiology
Principles of Biostatistics
Organization of Medical Care

In addition, the student may select from the general curriculum courses of interest to him, or do special work subject to approval of the Head of the Department of Industrial Hygiene.

3. At the end of the academic year, a comprehensive examination will be given. This may be oral or written and will be designed to test the knowledge and judgment of the student and his ability to coordinate the basic industrial health subjects.

PROGRAM OF SPECIALIZATION IN THE FIELD OF AVIATION MEDICINE

In February of 1953 the Advisory Board for Medical Specialties and the Council on Medical Education and Hospitals of the American Medical Association authorized certification by the American Board of Preventive Medicine, Inc. of properly qualified specialists in aviation medicine. The Harvard School of Public Health has developed a program to meet the Board requirements of one year

of graduate training in the areas of the basic sciences related to aviation medicine in a school of public health. This program has the approval of the Committee on Aviation Medical Training and Education of the Aero Medical Association. Those students wishing to obtain credit toward certification in the field of aviation medicine may enroll for the degree of Master of Public Health or Master of Industrial Health. (The latter degree probably will be approved by the American Board of Preventive Medicine, Inc.) The requirements for these degrees are outlined on pages 25–26 and 30–31. A series of seminars will be given in the academic year 1954–1955 to meet the special interests of those concentrating in the field of aviation medicine not only for representatives of the military services but also for those who plan to enter the medical services of the aircraft manufacturing companies and civil airlines.

PROGRAM OF STUDY IN PUBLIC HEALTH EDUCATION

This program is offered by the School of Public Health with the cooperation of the Department of Social Relations (Faculty of Arts and Sciences) and the School of Education. The program as outlined is flexible and may be modified to suit the needs of the student. Classwork is supplemented by three months of supervised field work, which is required for students without experience in health education.

Candidates may study for the degree of Master of Public Health or Master of Science in Hygiene, depending upon the qualifications of the individual applicant. Work toward the degree of Doctor of Science in Hygiene is offered to exceptional students.

Health education is an area of public health in which there has been rapid development in recent years. Professional opportunities are numerous and varied and exist at local, state and national levels in both official and voluntary agencies.

The program of study includes the following courses:

Public Health and Health Education

(School of Public Health)

Required Courses:		*Credits*
Ecology: Biological and Social		3
Principles of Public Health Practice		3
Public Health Administration		6
General	(2)	
Health Education	(2)	
Public Health Nursing	(1)	
Social Work in Health Agencies	(1)	
Principles of Biostatistics		4
Principles of Epidemiology		2.5
Principles of Sanitation		4
Public Health Nutrition		1.5
Psychosocial Problems		1
Workshop in Health Education		4
School Health Education		2
Group Dynamics		2
	TOTAL	33

Electives:

Courses in medical care; mental health; public health history; control of cancer, tuberculosis; and others may be elected depending on individual interests and training.

Social Relations and Education

(Faculty of Arts and Sciences; School of Education)

A selection of courses from the following, which presuppose some knowledge of the social sciences and education, will vary with the student's background and needs.

Social Relations

Course	*Credits*
Cognitive Processes in Personality (Psych. 148)	5

Developmental Trends in Personality (S.R. 183)	5
Field Methods in Survey Research (S.R. 265)	5
Health and Sickness in Cross-Cultural Perspective (S.R. 283)	5
Introduction to Anthropology (Anth. 1b)	5
Introduction to Group Dynamics (S.R. 148)	5
Opinion and Communication (S.R. 152)	5
Social Organization (S.R. 116)	5
Social Psychology (S.R. 117a)	5

Education

Course	*Credits*
Educational Policy (HFa-4)	5
History of Educational Thought (HFb-1)	5
Human Development (BFa-2)	5
Introduction to Administrative Problems (PRa-1)	5
Guidance (PRa-2)	5

Field Work

Arrangements will be made with approved official and voluntary agencies for three months of supervised field work in health education.

DEGREES IN ENGINEERING

Graduates of engineering colleges or scientific schools of recognized standing who are interested in the sanitary engineering or industrial hygiene aspects of public health may be admitted to the Division of Applied Science of the Graduate School of Arts and Sciences as candidates for the degree of Master of Science, Master of Engineering or Doctor of Philosophy. They may elect appropriate courses in the School of Public Health as a part of the program for these degrees.

For further information write to the Committee on Admissions, Graduate School of Arts and Sciences, Farlow House, Cambridge 38, Massachusetts.

CONTENT OF THE COURSES
OFFERED BY THE
FACULTY OF PUBLIC HEALTH

INTERDEPARTMENTAL COURSES

In addition to the instruction afforded in the various disciplines represented by the different departments of the School, it is believed to be important to bring the entire Faculty and student body together at frequent intervals to consider broad subjects of basic importance to the entire group. With this in mind, the School has provided the following interdepartmental courses.

Public Health Forums. The Evolution, Scope, and Objectives of Public Health

Lectures and seminars. *Dates to be announced.* Dean SIMMONS, members of the Faculty, and guest lecturers.

In order to afford an opportunity for the entire student body to meet with the Faculty and distinguished guest lecturers, forums are held at appropriate times during the academic year. The evolution, scope, and objectives of the profession of public health are the principal consideration of the forums.

The modern practice of public health requires coordinated teamwork and the integrated action of experts trained in a number of different, though related, scientific fields. Proper emphasis is given to training in these special disciplines in the courses offered by the various departments. However, it is impossible for every student to take all the courses, and certain individuals may have no contact with one or more departments. These general public health forums have the advantage of cutting across departmental lines. They give every student some contact with all sections of the School, and make it possible for him to learn something of the objectives and interests of each department and its relation to public health as a whole.

The main purposes of these lectures and seminars are to help orient the student, to assist him in visualizing the wide field covered by his chosen profession, and to stimulate constructive thinking and planning for his future activities.

Some of the sessions are devoted to a broad survey of the historic development, the present status, and the future objectives of public health; others present special applications of basic public health disciplines.

Public Health 1a. Ecology: Biological and Social

Lectures and seminars. *Mondays, Wednesdays and Fridays, 11–1, first period.* Dr. Reed, Dr. Paul and associates.

Credit 3 units.

The success of public health programs depends upon understanding the forms and forces active in community life. This course of instruction deals with social, cultural and biological characteristics of human populations, the organization and behavior of human communities, and their relationship to the environment. The objective of the course is to provide a knowledge of human populations and of the nature of interpersonal relationships in the community in preparation for the study of public health, in the same sense that anatomy, physiology and psychology contribute to the study of medicine.

Public Health 3c. History and Philosophy of Public Health

Seminars. *Saturdays, 9–11, third period.*

Credit 1 unit.

The growth, development and philosophy of the modern health movement, particularly in the Anglo-Saxon countries is discussed. Cultural, social and economic forces that have influenced the movement are studied in relation to the evolution of health sciences and services.

DEPARTMENT OF BIOSTATISTICS

HUGO MUENCH, A.B., M.D., DR.P.H., A.M. (hon.), *Professor of Biostatistics* and *Head of the Department*

JANE WORCESTER, A.B., DR.P.H., *Associate Professor of Biostatistics*

ROBERT B. REED, PH.D., *Associate Professor of Biostatistics and Human Ecology*

MARGARET E. DROLETTE, A.B., M.P.H., *Instructor in Biostatistics*

MARIAN G. MALOON, A.B., ED.M., *Instructor in Biostatistics*

Graduates of the School, whatever their chosen careers, will find themselves in positions where they must initiate programs and evaluate the results of the programs. Whether their work lies in administration or in research, students must be able to pose and to answer questions and to read critically the literature in their fields. Knowledge of the scientific method is essential to these purposes.

Since most students come to the School with no background in statistical technics and their application, the first course has been organized to present essential methodology, with the realization that few students will become workers primarily in the field of statistics. Relatively little emphasis is laid on technics per se, and these have been included only in the amount necessary for an appreciation of principles involved and methods used. The main stress is on the interpretation of quantitative data affected by a multiplicity of causes, the understanding of the meaning of the usual measures employed and the legitimate fields of use of these measures. In general, the first course is designed to help the student state his question clearly, determine the method which will answer the question and establish the limits within which the answer has validity.

In addition, elective courses provide opportunities for basic grounding in statistical methods and analytical procedures which are of value to the student who will be engaged in the fields of epidemiology, of laboratory research or of administration.

Biostatistics 1a, b. Principles of Biostatistics

Lectures, discussions, and laboratory. *Mondays and Fridays, 2–5, first and second periods.* Staff of the Department.

Credit 4 units.

Subjects presented include collection, tabulation, and elementary analysis of data; measures of center and of dispersion; and sampling from populations. The aim of the course is to prepare the student to draw justified conclusions from numerical data.

Biostatistics 2c, d. Analysis of Population Data

Lectures, discussions, and laboratory. *Tuesdays and Thursdays, 9–12, third period; Tuesdays, 9–12, fourth period.* Staff of the Department.

Credit 3 units.

The student is introduced to statistical methods which he will find of use in his attack on various types of problems. The subject matter in the third period includes a discussion of probability, association and correlation with examples from a variety of fields in public health. The fourth period is devoted to life table methods and simple mathematical models which can be used to describe the growth of individuals, populations and certain characteristics of the population such as immunity status.

Prerequisites: Biostatistics 1a, b; Epidemiology 1b; or their equivalents.

Biostatistics 3c, d. Analysis of Data Resulting from Special Studies

Lectures, discussions and laboratory. *Tuesdays and Thursdays, 9–12, third period; Thursdays, 9–12, fourth period.* Staff of the Department.

Credit 3 units.

During the third period this course meets jointly with Biostatistics 2c, d. In the fourth period emphasis is placed on statistical technics used in planned studies including small sample theory, variance analysis, dosage response and design of experiments.

Prerequisites: Biostatistics 1a, b.

Biostatistics 4c, d. Collection and Use of Population Data

Lectures and seminars. *Tuesdays, 2–4, third and fourth periods.* Staff of the Department, with the cooperation of other departments.

Credit 2 units.

This course deals with the methods, available to public health workers, for obtaining data about the health of populations. During the third period, attention is given to the routine sources of health data — registration systems, service records, and censuses. The fourth period is devoted to the sample survey method with attention to problems of sampling, questionnaire design and the collection and processing of data.

Although the course is designed as a single unit, it is possible to elect the work of either period independently.

Prerequisites: Biostatistics 1a, b; basic courses in administration.

Biostatistics 5c, d. Seminar in Biostatistics

Seminars. One period of two hours weekly throughout the third and fourth periods. Time to be arranged. Staff of the Department.

Credit 2 units.

This seminar is arranged primarily for the Department's staff. However, occasional students with special interest and sufficient preparation will be admitted.

Biostatistics 20. Biostatistical Research

Time and credit to be arranged according to amount of work done.

Reading and research in selected topics of biostatistics by students specializing in the field or those who desire supervision in working out statistical problems in their special fields of interest. Opportunity is given to take informal part in studies being carried on by members of the Department's staff, such as the statistical evaluation of measures of normal growth.

DEPARTMENT OF EPIDEMIOLOGY

John E. Gordon, s.b., ph.d., m.d., a.m. (hon.), f.r.c.p. (Lond.), *Professor of Preventive Medicine and Epidemiology* and *Head of the Department*

Theodore H. Ingalls, a.b., m.d., *Associate Professor of Epidemiology*

A. Daniel Rubenstein, a.b., m.d., m.p.h., *Associate Clinical Professor of Epidemiology*

Thomas F. Pugh, m.d., m.p.h., *Assistant Professor of Epidemiology*

Alton S. Pope, a.b., m.d., dr.p.h., *Lecturer on Epidemiology*

John J. Poutas, a.b., m.d., *Visiting Lecturer on Epidemiology*

Francis B. Carroll, d.m.d., m.d., m.p.h., *Visiting Lecturer on Epidemiology*

Conrad Wesselhoeft, m.d., *Visiting Lecturer on Infectious Diseases*

John C. Ayres, s.b., m.d., m.p.h., *Instructor in Epidemiology*

Frank L. Babbott, Jr., a.b., m.d., m.p.h., s.m. in hyg., *Instructor in Epidemiology.*

Hugh L. C. Wilkerson, s.b., m.d., m.p.h., *Research Associate in Epidemiology*

F. Randolf Philbrook, s.b., m.d., m.p.h., *Research Associate in Epidemiology*

Carl E. Taylor, s.b., m.d., dr.p.h., *Research Associate in Epidemiology* (Absent 1954–55)

John B. Wyon, b.a., m.b.,b.ch., m.r.c.p., m.p.h., *Research Associate in Epidemiology* (Absent 1954–55)

Natesaier Purshottam, m.b.,b.s., s.m., m.p.h., *Research Associate in Epidemiology* (Absent 1954–55)

Ruth H. S. Taylor, s.b., a.b., m.d., m.p.h., *Research Associate in Epidemiology.*

Joan G. Babbott, a.b., m.d., m.p.h., *Research Fellow in Epidemiology*

Louis Weinstein, s.m., ph.d., m.d., *Lecturer on Infectious Diseases*

Epidemiology is viewed as medical ecology and the diagnostic discipline of mass disease. Multiple causation is considered a principle in the origin of mass disease; therefore epidemiology is a multiphasic discipline. It draws upon skills within public health and upon the medical and social sciences.

The epidemiologic method enters into all activities that relate to mass disease, as does diagnosis in clinical medicine. It permits programs to be formed and measures of prevention and control to be instituted, based first on established cause and secondly on the nature of the individual problem. It is an integral part of public health practice, whatever the field of interest, to such extent that epidemiological work in public health is done more by others than by the specialist. As a consequence, all workers in public health need to be familiar with the objectives and methods of epidemiology.

The initial required course, Epidemiology 1b, is limited to demonstration of principle and the applications to which those principles are turned.

Epidemiology 5c is an elective laboratory course on methods of field study of mass disease. Problems from acute and chronic infection provide the basic material for study. This course is for physicians, dentists and veterinarians desiring a second course in epidemiology and a presentation of practical means for solving health problems. Epidemiology 6d, a combined course given with the Department of Public Health Practice, is in logical sequence with Epidemiology 5c, being concerned with the organization of community resources to meet the requirements of specific problems defined epidemiologically.

Epidemiological interests in fields other than the communicable diseases have had increasing attention in recent years. Epidemiology 7d is a laboratory course based on problems of chronic non-infective disease and on mass injury. This course and Epidemiology 5c give experience in epidemiologic method and field procedure.

Course 2c is for students who wish to review current interests in the common communicable diseases of temperate climates. Course 3a,b,c,d is largely clinical and may be elected in one or all periods.

Course 8d is an advanced course primarily for students majoring in biostatistics, microbiology or epidemiology, and Course 9d is for students from the military services and for majors in epidemiology or departments of allied interest.

Epidemiology 15 runs throughout the academic year and is designed to give practice through independent and individual effort in applying epidemiologic method to analysis of mass disease. The course is for students preparing for careers in epidemiology, in microbiology, in administrative public health practice, including tropical public health and maternal and child health. Places in the course, limited to ten, ordinarily are allotted these several interests.

Epidemiology 1b. Principles of Epidemiology

Lectures and seminars. *Mondays and Fridays, 11–1, Wednesdays, 11–12, second period.* Dr. Gordon and associates.

Credit 2.5 units.

This introductory course outlines the means by which disease of human populations is recognized and by which the multiple factors in causation are evaluated, those which determine origin and also those which govern course and extent. The main concern is therefore with ecologic analysis of mass disease, in terms of environment, host and agent of disease, and according to time and place. This required course is limited to principles, which have developed primarily from knowledge of the communicable diseases. Illustrative examples of the application of these principles to other fields such as nutrition, traumatic injuries, mental disorder, industrial hygiene and chronic degenerative and neoplastic diseases are presented through seminar discussion, to give understanding of the present-day scope of epidemiology and the uses of the epidemiologic method.

Prerequisite: Biostatistics 1a,b.

Epidemiology 2c. Clinical Epidemiology

Lectures, demonstrations, clinics and conferences. *Mondays and Wednesdays, 12–1*; Clinics, *Fridays, 3.30–5, third period.* Dr. Ingalls, Dr. Wesselhoeft, Dr. Weinstein.

Credit 1.5 units.

The common acute communicable diseases of temperate climates are presented. Methods of diagnosis, treatment and control are given and the movement of disease in small social groups is studied through analysis of recorded outbreaks within the structure of families, schools, camps, apartment houses, offices, and hospitals.

The course is for physicians who wish to review common communicable diseases with special reference to the problems of the health officer. Epidemiologists, veterinarians, dentists and students of other public health disciplines with demonstrated need for the course are admitted.

Epidemiology 3a, 3b, 3c, 3d. Clinical Infectious Diseases

Clinics. *Saturdays, 9–11, first, second, third, or fourth periods.* Dr. Weinstein and associates.

Credit .5 unit in each period.

Clinical conferences on the care and management of patients with acute infectious diseases are held weekly by the staff of the Haynes Memorial Hospital. Topics are selected according to available clinical material. Students may attend in one or more periods.

Epidemiology 5c. Practice of Epidemiology

Laboratory exercises, conferences, seminars. *Mondays, Wednesdeys and Fridays, 9–12, third period.* Dr. Rubenstein, Dr. Pugh, Dr. Frank Babbott.

Credit 3 units.

A laboratory course devoted to the epidemiology of acute communicable diseases. The aim is to provide experience in epidemiologic method through solving problems drawn mainly from current practice. Collection of field data and the analysis and interpretation of results are related to epidemic and endemic situations. Modes of infection are defined and the laws of epidemics examined. Principal sources of infection are studied. The epidemiologic behavior of individual diseases, so chosen as to represent major means of transmission are presented in systematic fashion. Correlation of clinical, field and laboratory procedures is emphasized in the development and evaluation of programs for prevention of infectious disease and the management of epidemics.

Prerequisite: Epidemiology 1b.

Epidemiology 6d. Control of Communicable Disease

Seminars. *Fridays, 9–11, fourth period.* Dr. Feemster and Dr. Philbrook.

Credit 1 unit.

This course is given jointly with the Department of Public Health Practice. (See Public Health Practice 16d.) Specific problems, partly drawn from Epidemiology 5c, are studied from the administrative standpoint. Attention is centered on elements of control programs according to personnel and facilities available in the given situation. The emphasis is on operational procedure in diagnosis and management of mass disease.

Prerequisite: Epidemiology 5c.

Epidemiology 7d. Non-Infective Mass Disease and Injury

Laboratory exercises, conferences and seminars. *Mondays and Wednesdays, 9–12, fourth period.* Dr. Ingalls and associates.

Credit 2 units.

A laboratory course concerned with the origin and behavior of non-infective mass disease and injury. The main emphasis is on chronic conditions of degenerative, metabolic and neoplastic nature, and the factors that determine endemic distributions. Congenital anomalies and other disorders of growth and development are a second division. Traumatic mass injury, primarily accidents and chemical intoxications, represent acute conditions. Situations that give aggregation of cases and distributions of epidemic proportions are a further interest. Selected problems illustrate modifications in epidemiological method and procedure applicable to these diseases. Special consideration is given to surveys of incidence and prevalence, to case finding, sources of exist-

ing information, and to field methods of acquiring desired data through retrospective and prospective studies. Limited to twenty students.

Prerequisite: Epidemiology 1b.

Epidemiology 8d. Quantitative Method in Epidemiology

Lectures and seminars. *Saturdays, 9–11, fourth period.* Dr. Ipsen.

Credit 1 unit.

This course is designed for students with sound preparation in biology and biostatistics. The principal concern is with theoretical epidemiology and causality of mass disease. Quantitative methods are applied to analysis of the movements of disease in population groups with special consideration of the forces that act to produce epidemics.

Epidemiology 9d. Military Preventive Medicine

Seminars. *Fridays, 11–1, fourth period.* Dr. Gordon and Dr. Philbrook.

Credit 1 unit.

A series of seminars, conferences, and demonstrations concerned with administrative and professional problems in military preventive medicine. Designed primarily for students from the military services.

Admission by permission of the instructor.

Epidemiology 15a, b, c, d. Advanced Epidemiology

Seminars. *Wednesdays, 2–4, first and second periods; Fridays, 2–4, third period; Mondays, 2–4, fourth period; other time to be arranged.* Dr. Gordon.

Credit 1 to 3 units in each period.

An informal tutorial course designed to further a command of the epidemiologic method through individual training and practical experience. Each student is assigned a problem or develops a previous interest through field study, laboratory experiment, or library investigation. Seminars are devoted to discussion of these problems. Admission is by permission of the instructor and credit is in proportion to the amount of time devoted to the work. No more than ten students will be accepted.

Epidemiology 20. Research in Epidemiology

Time to be arranged; admission subject to approval of the instructor. Work may be elected with any departmental staff member.

Qualified students are offered the opportunity to undertake special studies in the acute communicable diseases, or in community problems of noncommunicable processes or injuries. Problems may be assigned or aid is provided in developing individual interests.

Epidemiology 30c. Operational Epidemiology

Field visits, January 31–February 5, inclusive. Dr. Rubenstein.

Credit 1 unit.

A week of planned visits in the New York area, limited to field and research activities in epidemiology, and including the Bureau of Preventable Diseases, Bureau of Laboratories, City of New York Department of Health, Public Health Research Institute, Lederle Laboratories, United Nations World Health Organization, Milbank Memorial Fund, American Public Health Association, and State University of New York Medical Center.

DEPARTMENT OF INDUSTRIAL HYGIENE

Philip Drinker, s.b., chem.e., s.d. (hon.), ll.d., a.m. (hon.), *Professor of Industrial Hygiene* and *Head of the Department*

Constantin P. Yaglou, b.a., s.b., m.m.e., a.m. (hon.), *Professor of Industrial Hygiene*

Leslie Silverman, s.d., *Associate Professor of Industrial Hygiene Engineering*

Ross A. McFarland, a.b., ph.d., s.d. (hon.), *Associate Professor of Industrial Hygiene*

Charles R. Williams, ph.d., *Assistant Professor of Industrial Hygiene*

Robert B. O'Connor, a.b., m.d., *Assistant Professor of Industrial Medicine*

Robert C. Page, a.b., m.d., *Visiting Lecturer on Industrial Hygiene*

James H. Sterner, s.b., m.d., *Visiting Lecturer on Industrial Hygiene*

Melvin N. Newquist, a.b., s.b., m.d., *Visiting Lecturer on Industrial Hygiene*

Allen D. Brandt, s.d., *Visiting Lecturer on Industrial Hygiene Engineering*

William B. Harris, chem.e., s.m., *Visiting Lecturer on Industrial Hygiene Engineering*

Nathan Van Hendricks, s.b., chem.e., *Visiting Lecturer on Industrial Hygiene Engineering*

Emma S. Tousant, ll.b., *Instructor in Industrial Hygiene*

William D. Small, s.m., *Instructor in Industrial Hygiene*

Richard Dennis, s.m., *Research Associate in Industrial Hygiene*

Charles E. Billings, s.m., *Research Associate in Industrial Hygiene*

David M. Anderson, s.b., *Research Fellow in Industrial Hygiene*

William R. Samples, s.b. in chem.e., *Research Fellow in Industrial Hygiene*

I. Louis Beauchamp, s.b., m.p.h., *Research Fellow in Industrial Hygiene*

William A. Burgess, s.m., *Assistant in Industrial Hygiene Engineering*

B. A. Lindberg, m.e., *Associate Professor of Business Administration*

Harriet L. Hardy, a.b., m.d., *Clinical Associate in Preventive Medicine*

Albert O. Seeler, a.b., m.d., *Clinical Associate in Medicine*

Industrial Hygiene 1c. Basic Problems in Industrial Hygiene

Lectures and demonstrations. *Mondays and Fridays, 2–4, Wednesdays, 1:30–5, third period.* Professor DRINKER, Dr. SEELER, and associates.

Credit 3 units.

A course of lectures, demonstrations, and inspections showing the relation of working conditions to health, with special reference to elimination of industrial hazards and prevention and treatment of industrial disabilities and diseases. (Industrial Hygiene 1c and 8d are classified as Eng. 285.)

Industrial Hygiene 2a, b and 2c, d. Industrial Air Analysis

Laboratory work. *Tuesdays and Thursdays, 2–5, all four periods.* Dr. SILVERMAN and Dr. WILLIAMS.

Credit 4 units in each term.

Determination and interpretation of adverse conditions found in work places of all types, such as factories and mills, and in assembly halls; methods employed in determining physical properties of the air, such as temperature, humidity, and air motion; atmospheric impurities and normal constituents of the air — gases, dusts, bacteria, and pollens; efficiencies of protective devices — masks, respirators, mechanical dust-collecting apparatus, hoods, and exhausters; efficiencies of air-conditioning equipment.

Course 2a, b (Eng. 281a) is intended for public health engineers and physicians enrolled in the Industrial Health program. Course 2c, d (Eng. 281b) is a continuation, primarily for students in industrial hygiene.

Industrial Hygiene 3c, d. Industrial Medical Clinics

Time and credit to be arranged. Dr. O'CONNOR, Dr. SEELER, Dr. HARDY, and associates.

Students participate in appropriate clinics at teaching hospitals and in medical clinics of various industries.

Industrial Hygiene 4c. Personnel Administration

Lectures. *Mondays and Wednesdays, 8:30–10, third period.* Associate Professor LINDBERG.

Credit 1.5 units.

The objectives of this course are to explore various types of industrial and business organizations, to develop an appreciation of the various relations between departmental functions, and to trace the effects of these relations upon the individual worker, the supervisor, the organization itself, and society.

The functions of a medical department as well as its interrelations with other line and staff departments are considered. Special consideration is given to problems in the administration of a medical department where collective bargaining relations exist. These functions, activities, and problems are studied

through a series of cases covering employee health, employee safety, rehabilitation, and retirement programs.

Industrial Hygiene 5c. Human Problems of Adjustment in Industry

Lectures and demonstrations. *Mondays, Wednesdays and Fridays, 12–1, third period.* Dr. McFarland.

Credit 1.5 units.

The primary objective of this course is to apply the technics of the various biological sciences to the problems of adjusting workers to their jobs. The initial emphasis is on the selection and placement of workers and the design of equipment to meet human requirements. A study of job requirements is then made to determine the psychologic and physical demands placed upon the worker in achieving successful job placement. With this background, principles are derived for the control of accidents, operational fatigue, and other basic factors influencing efficiency and health. Attention is also given to the problems of gerontology and of workers with physical handicaps. The course is concluded with emphasis on mental and emotional adjustment of workers and factors influencing effective group functioning.

Industrial Hygiene 6c. Industrial Medicine

Lectures and seminars. *Mondays, Wednesdays and Fridays, 10–12, third period.* Dr. O'Connor and associates.

Credit 3 units.

This course is devoted to medical problems of importance to the industrial physician. The following are among the subjects that are considered: functions of the industrial physician; functions of the industrial nurse; organization of industrial medical departments; medical aspects of workmen's compensation; preplacement examinations; geriatric problems in industry and rehabilitation; relation of trauma to disease.

Industrial Hygiene 7d. Industrial Hygiene Engineering

Lectures and problems. *Mondays, Wednesdays and Fridays, 2–4, fourth period.* Professor Drinker and Dr. Silverman.

Credit 3 units.

Control of industrial conditions by engineering methods; field trips, reports, design and operation of equipment. For engineers. (Industrial Hygiene 1c and 7d are classified as Eng. 282.)

Industrial Hygiene 8d. Hygienic Aspects of Ventilation and Air Conditioning

Lectures. *Tuesdays and Thursdays, 8:30–10, fourth period* Professor Yaglou.

Credit 1.5 units.

Selected topics in ventilation and air conditioning of interest to students in sanitary engineering and in public health. (Industrial Hygiene 1c and 8d are classified as Eng. 285.)

Engineering 280. Heating and Air Conditioning

Lectures. *Mondays, Wednesdays and Fridays, 8–9, fall term, at Pierce Hall, Cambridge.* Professor YAGLOU.

The theory and practice of heating and air conditioning. For engineers.

Industrial Hygiene 20. Research

A limited number of qualified students will be given an opportunity to do research work in problems of industrial health including occupational disease, toxicology, air cleaning, heating, ventilating, and air conditioning, by arrangement with the head of the Department.

Industrial Hygiene 40d. Human Factors in Industrial Safety

Lectures and seminars. Time and credit to be arranged. Dr. MCFARLAND.

Emphasis is placed on the role of human factors in industrial safety. The significance of the problem is ascertained first by an analysis of accident statistics and records in various industries. The different methods of controlling accidents is then considered with equal emphasis on: (a) the selection and training of workers, including the detection of accident repeaters, (b) the design of equipment and working areas, including work practices, and (c) environmental influences, including noise, illumination, temperature and humidity. The influence of temporary attributes of the individual on accident causation, such as fatigue, loss of sleep, alcohol and drugs is studied as well as the role of age, emotion and morals.

Industrial Hygiene 41d. Special Environmental Problems

Lectures and demonstrations. Two hours a week, time to be arranged, in the fourth period. Professor DRINKER and associates.

Credit 1 unit.

This course was given in 1953–54 on a trial basis and included air pollution and related meteorology, measurement and control of noise, and hazards to man from nuclear radiation. It may be developed further in 1954–55.

DEPARTMENT OF MATERNAL AND CHILD HEALTH

HAROLD C. STUART, LITT.B., M.D., A.M. (hon.), *Professor of Maternal and Child Health* and *Head of the Department*

BERTHA S. BURKE, A.M., *Associate Professor of Maternal and Child Nutrition*

ELIZABETH P. RICE, A.B., S.M., *Associate Professor of Public Health Social Work*

SAMUEL B. KIRKWOOD, A.B., M.D., *Clinical Professor of Maternal Health* and *Commissioner of Public Health, Department of Public Health of Massachusetts*

LEONA BAUMGARTNER, PH.D., M.D., S.D. (hon.), *Visiting Lecturer on Maternal and Child Health*

WILLIAM M. SCHMIDT, S.B., M.D., *Visiting Lecturer on Maternal and Child Health Practice*

ROBERT G. RICE, B.A., B.SC., M.D., C.M., M.P.H., *Instructor in Maternal and Child Health* and *Director of Division of Maternal and Child Health, Department of Public Health of Massachusetts*

GEORGE KAHN, S.B., M.D., M.P.H., *Instructor in Child Health* and *Medical Inspector, City of Boston Health Department*

PAULINE G. STITT, M.D., M.P.H., *Instructor in Maternal and Child Health*

RUTH BUTLER, A.B., S.M., *Research Associate in Medical Social Work*

MARJORIE PARSONS, S.B., *Assistant in Public Health Nursing*

FLORENCE E. CYR, A.B., S.M., *Assistant in Social Work*

ELIZABETH O. GRANT, S.B., *Assistant in Maternal and Child Health*

CHARLES A. JANEWAY, A.B., M.D., *Thomas Morgan Rotch Professor of Pediatrics*

WILLIAM T. GREEN, A.M., M.D., *Clinical Professor of Orthopedic Surgery*

CLEMENT A. SMITH, A.M., M.D., *Associate Professor of Pediatrics at the Boston Lying-in Hospital*

J. ROSWELL GALLAGHER, A.B., M.D., *Assistant Professor of Clinical Pediatrics*

DANE G. PRUGH, A.B., M.D., *Associate in Pediatrics*

RALPH A. ROSS, A.B., M.D., *Clinical Associate in Pediatrics*

LENDON SNEDEKER, A.B., M.D., M.P.H., *Instructor in Pediatrics*

ROBERT M. RAVVEN, M.D., PH.D., *Instructor in Psychiatry*

The public health problems and activities which concern a division of maternal and child health have to do with many fields of science. Some of these relate to the health and welfare of all age groups, but are of particular importance to the infant or the child. Others are problems of early life only, or require special services for these age groups. Still others relate only to the health of women during the childbearing period. Since this range of subjects

is very broad, the Department gives little attention to those problems pertaining to health which are more fully considered by other departments of the School. On the other hand, the special problems peculiar to maternity and childhood are considered, even though they may relate to the general fields of other departments. Thus the special aspects of diet during pregnancy and lactation, infant feeding, and diet at succeeding periods of childhood are emphasized. Communicable diseases commonly occurring in childhood are not studied in all aspects, but immunization procedures and environmental control measures particularly applicable in early life are discussed. Administrative procedures for the conduct of special maternal and child health services are given consideration, in close collaboration with the Department of Public Health Practice.

A program of seminars, covering the special problems of maternal and child health, is conducted throughout the academic year; designed primarily for and required of students majoring in this Department. During the first two periods, the problems of maternity, infancy, childhood, and adolescence are dealt with; during the third period, attention is devoted to the regular health services organized to meet these problems and the administrative aspects of these services and in the fourth period, to special programs for selected groups of handicapped children. In addition, students majoring in maternal and child health are required to do individual work, during the third and fourth periods as described under Maternal and Child Health 20 and to take one field trip as described under Maternal and Child Health 30.

The Department offers advanced seminar courses as electives for those who are interested and qualified. In the third period, a course is given in social problems and in the fourth period courses are given in maternal and child nutrition, physical growth and development and in recent advances in obstetrical care.

In addition to the courses required of all students enrolled for the Master of Public Health degree, students majoring in maternal and child health are expected to take as many of the following courses as their schedule permits, approval of their selections by the head of the Department concerned being required for some: Public Health Nutrition (first period) and Basic Nutrition (second and third periods) in the Department of Nutrition; Organization of Medical Care (second period), and the general course in Public Health Practice (P.H.P. 10c, d, third and fourth periods) which includes study of the fields of public health administration, health education, public health nursing and social work in health programs.

Clinical demonstrations and field visits will be arranged from time to time in connection with discussions of clinical problems and services, especially in time set aside for individual work in the third and fourth periods. These may be at the Boston Lying-in Hospital, the Children's Medical Center, the Whittier Street Health Center Field Training Unit, or in public or private health

agencies in the vicinity. It should be understood, however, that clinical training in obstetrics and pediatrics cannot be provided as part of the curriculum offered by this Department.

All the courses in maternal and child health are organized on a panel or seminar basis, with introductory lectures as required for presentation of material not readily available in the literature. Active student participation in discussions is encouraged and assignments are made of subjects for individual presentation.

BASIC COURSES

(Required of students majoring in the Department)

Maternal and Child Health 1a, b. Basic Problems

Lectures and seminars. *Tuesdays and Thursdays, 11–1, first period; 2–4, second period.* Dr. STUART, Dr. KIRKWOOD, Mrs. BURKE, Miss RICE, Dr. STITT and Dr. REED.

Credit 4 units.

This course deals first with special problems of maternity in relation to the periods of pregnancy, labor, delivery, and the puerperium, from the standpoints of maternal, fetal, and early infant health. The course then deals with the well child and his nutritional and other requirements for normal growth and health. It considers the social, psychologic, educational and other factors in family and community life which have an important bearing on the mother and the child. It deals further with the relative importance of different causes of death and illness by age and locality and with the progress thus far made in preventing these occurrences. The purpose here is to provide a better understanding of the extent and nature of the leading problems of maternal and child health. Familiarity with these subjects is essential for work in this field and is important for those who propose to take the other special courses given by the Department.

Maternal and Child Health 3c, 3d. Services, Programs, and Administration

Lectures and seminars. *Mondays and Wednesdays, 9–11, third and fourth periods.* Dr. STUART, Mrs. BURKE, Miss RICE, Dr. STITT, Miss VARLEY, associates and guest lecturers.

Credit 4 units.

This course is designed to provide thorough understanding of the methods of organizing and supervising programs and services to deal with the special problems of maternal and child health at various levels of government and in different types of communities. Administration of programs will be discussed and demonstrations of services afforded whenever circumstances permit. Administrators from the field will participate in the course from time to time as guest lecturers or in panel discussions. Insofar as possible the services

will be grouped under the headings of Maternal and Newborn Services, Infant and Pre-school Child Health Services and School Health Services during the third period and Programs for Crippled or Handicapped Children during the fourth period. Each will also be considered in relation to federal, state, and municipal programs, and services in rural areas. Students majoring in Maternal and Child Health will be given opportunities to visit clinics and other services concurrently with these seminars in time set aside for Maternal and Child Health on Thursdays during the third and fourth periods.

Students with adequate background, majoring in Public Health Practice, may obtain permission from the Head of the Department of Maternal and Child Health to elect either 3c or 3d, as both are concerned principally with programs and their administration.

ADVANCED ELECTIVE COURSES

(For students majoring in the Department or in a field related to the subject of the course)

Maternal and Child Health 5c. Social Problems and Available Social Services for Children

Seminars. *Fridays, 9–11, third period.* Miss Rice and associates.

Credit 1 unit.

This course will cover the historical development of child welfare services, discussions of such problems as foster home and institutional care of children, adoption, illegitimacy, medical neglect, child delinquency, social legislation and organization of community services for children.

Maternal and Child Health 6d. Maternal and Child Nutrition

Seminars. *Tuesdays, 9–11, fourth period.* Mrs. Burke and associates.

Credit 1 unit.

This course is designed primarily for advanced training of students majoring in public health nutrition or in maternal and child health. It deals with the nutritional requirements of pregnancy and lactation, of infancy, and of the preschool and school child and the adolescent. The practical problems involved in fulfilling these needs are discussed from the physiologic, psychologic and socio-economic aspects. Nutrition services in a well-rounded public health program for maternal and child health are discussed.

Maternal and Child Health 7d. Physical Growth and Development

Seminars. *Fridays, 9–11, fourth period.* Dr. Stuart and associates.

Credit 1 unit.

This course will explore more fully than Maternal and Child Health 1a, b

the aspects of physical growth and development from the fetal through the adolescent periods which are significant in relation to problems of child health and preventive pediatrics. The use and interpretation of physical measurements, roentgenograms and various norms and charts in current use as aids in the assessment of physical status and growth progress will be considered. So also, the clinical evaluation of the child's progress from pediatric, orthopedic and dental points of view and the evaluation of health histories to determine possible causes of poor status or progress will be discussed. Longitudinal data from individual children followed periodically during the developmental period will be studied as clinical examples.

Maternal and Child Health 8d. Recent Advances in Obstetrical Care

Seminars. *Tuesdays, 4–5, clinic time to be arranged, fourth period.* Dr. KIRKWOOD.

Credit 1 unit.

This course consists of informal discussions, demonstrations and ward rounds. It is designed for the student who may have been out of recent contact with clinical obstetrics and gynecology and stresses the important advances in the medical care of the mother, particularly as they relate to the administration of maternal and child health programs.

Maternal and Child Health 20. Special Assignments for Individual Work

This work is designed specifically for students majoring in maternal and child health or a closely related field. It affords these students an opportunity to do individual work for credit under instructor guidance on problems relating to this special field. Each program will be arranged in conference between student and instructor and must be accepted in advance by the Head of the Department. In general, such programs will include review of the literature on the subject selected, field observations including some original work, and a paper reporting the work done. Students majoring in maternal and child health are required to have 2 units of credit in this course in each of the third and fourth periods.

Maternal and Child Health 30c and 30d

Field trips for observation of maternal and child health services. Three to five days each, during periods in January and April. Dr. STITT, Miss VARLEY and associates.

Credit 1 unit for each five-day trip.

Students taking these field exercises have opportunities to see programs in operation under Departments of Maternal and Child Health and to participate in discussions with members of these departments regarding practical problems of service and administration. At least one five-day period is required of those majoring in the Department.

Maternal and Child Health 31c and 31d

During the third and fourth periods, group field visits, special clinics and individual field assignments are made on Thursdays for which credit up to one unit per period will be given.

DEPARTMENT OF MICROBIOLOGY

JOHN C. SNYDER, A.B., M.D., *Professor of Microbiology* and *Head of the Department*

EDWARD S. MURRAY, A.B., M.D., M.P.H., *Associate Professor of Microbiology* and *Assistant Medical Adviser to the Department of Hygiene*

JOHANNES IPSEN, C.A., C.M., DR.MED., M.P.H., *Associate Professor of Public Health* and *Superintendent of the Institute of Laboratories, Massachusetts Department of Public Health*

ROBERT S. CHANG, S.B., M.D., S.D. IN HYG., *Associate in Microbiology*

GEOFFREY EDSALL, M.D., *Visiting Lecturer on Microbiology*

HERALD R. COX, A.B., S.D., S.D. (hon.), *Visiting Lecturer on Microbiology*

HENRY S. FULLER, S.B., M.D., M.P.H., *Visiting Lecturer on Microbiology*

RICHARD H. DAGGY, S.M., PH.D., M.P.H., *Visiting Lecturer on Entomology*

GILBERT J. DALLDORF, S.B., M.D., *Visiting Lecturer on Microbiology*

JAMES A. MCCOMB, D.V.M., *Instructor in Public Health Immunology*

JOHN M. NEWELL, A.B., S.D., *Instructor in Public Health Immunology*

SAMUEL D. BELL, JR., A.B., M.D., M.P.H., *Research Fellow in Microbiology*

WILLIAM HADDON, JR., S.B., M.D., *Research Fellow in Microbiology*

JOHN F. ENDERS, A.B., A.M., PH.D., *Associate Professor of Bacteriology and Immunology*

MONROE D. EATON, A.M., M.D., *Associate Professor of Bacteriology and Immunology*

ALBERT H. COONS, A.B., M.D., *Visiting Professor of Bacteriology and Immunology; Career Investigator of the American Heart Association*

ROBERT A. MACCREADY, S.B., M.D., *Associate in Bacteriology and Immunology* and *Assistant Director of the Division of Communicable Diseases, Department of Public Health of Massachusetts*

The students in the School of Public Health may be considered in three categories as regards their previous training in microbiology.

(a) *Students who have had satisfactory previous instruction but who have not had extensive experience in the field.* Most of the candidates for the degree of Master of Public Health belong in this group. The regularly scheduled courses in microbiology in the School of Public Health are designed primarily for these students.

(b) *Students whose background in microbiology is negligible.* In this group are those students whose previous instruction was received many years before their matriculation in the School of Public Health, and whose activities have not brought them into contact with the developments in bacteriology. Also in this group are the students whose previous instruction was incomplete or unsatisfactory for various reasons. This group is advised to take a basic course in bacteriology and immunology such as Bacteriology 201, Harvard Medical School, or Sanitary Engineering 2a, b (Sanitary Bacteriology) given by the Department of Sanitary Engineering, or a similar course elsewhere.

Candidates for the degree of Master of Public Health who fall in this category are required to complete a basic course in medical or sanitary bacteriology before they may receive their degrees.

(c) *Students who have had extensive experience and who are familiar with the principles and standard methods.* The regularly scheduled courses in the School of Public Health are not designed for this group. However, several opportunities for advanced training are available. By arrangement with the Massachusetts Department of Public Health, students may study in the Institute of Laboratories, which includes the Biologic Laboratories, the Wassermann Laboratory, and the Diagnostic Laboratory. Courses in various aspects of sanitary bacteriology are given by the Department of Sanitary Engineering. Suitably qualified students may wish to take one or more of the courses in advanced bacteriology which are described in detail in the official register of the Division of Medical Sciences of the Graduate School of Arts and Sciences.

Microbiology 1a, b. Principles of Bacteriology and Immunology

Lectures and demonstrations. *Wednesdays and Fridays, 9–10, first period; Tuesdays and Thursdays, 9–10, second period.* Dr. Snyder, Dr. Murray and Dr. Chang.

Credit 2 units.

This course considers the bacteria, viruses, rickettsiae, and fungi which are pathogenic for man. The principles of bacteriology and immunology are discussed in relation to the problems of public health with emphasis on recent developments. The course is designed particularly for students who will be concerned with communicable diseases.

Prerequisite: Medical Bacteriology.

Microbiology 2c, d. Current Research in Microbiology

Department Staff. Eight meetings during the third and fourth periods, time to be arranged.

Credit .5 unit.

This course is arranged for the students who are concentrating in microbiology. Important papers from current periodicals on topics of general interest are assigned to the students for presentation. These papers are considered critically in respect to evaluation of the experimental work, analysis of the results, organization of the manuscripts, and clarity of presentation.

The purpose of the course is to develop the ability of the students to read the literature analytically and to plan their own work and manuscripts effectively.

Prerequisite: Microbiology 1a, b or equivalent previous instruction.

Microbiology 11b. Public Health Laboratory Procedures

Lectures, seminars, and laboratory exercises. *Tuesdays and Thursdays, 2–5, Wednesdays, 12–1, and two hours per week individual laboratory work, second period.* Dr. Murray and Dr. Chang.

Credit 3 units.

This course considers briefly the standard laboratory technics and includes recent methods for study of representative rickettsiae and viruses. It is designed for students who are likely to be involved in various relations with public health laboratories. However, it does not offer the detailed technical training of the sort needed by persons who will be engaged primarily in laboratory work.

Technics used in serology and bacteriology are demonstrated and short exercises illustrate the important principles of the tests. In the portion of the course devoted to rickettsiae and viruses the students themselves inoculate embryonated eggs and animals by various routes, and perform neutralization tests and red cell agglutination tests.

Limited to fourteen students who have completed Microbiology 1a.

Microbiology 12a, 12c, d. Biological Products in Public Health

Seminars and laboratory demonstrations at the Institute of Laboratories of the Massachusetts Department of Public Health. *Mondays 9–10:30, first period; Fridays 8:30–10, third period; hours to be arranged, fourth period, and individual laboratory work.* Dr. Ipsen.

Credit 1 unit first period; 2 units third and fourth periods.

In the first period, technics for production of biological products used in public health are demonstrated. Seminar discussions deal with the practical importance of biologics in control of communicable disease and their appropriate uses.

The third and fourth periods are devoted to principles and practices in the design of experiments in microbiology in relation to official potency tests, to other laboratory experiments, and to field assays of biologics in human populations.

Enrollment for 12a or 12c, d, separately is acceptable.

Opportunities are offered properly qualified students for original work at the Institute in problems of Public Health Immunology with credit for Course Microbiology 20 to be arranged with the Head of the Department.

Microbiology 13c, d. Rickettsial and Viral Diseases of Public Health Importance

Lectures, laboratory exercises, and seminars. *Mondays and Wednesdays, 2–5, third period; Wednesdays and Fridays, 2–5, fourth period; and four hours per week individual laboratory work.* Dr. Chang, Dr. Murray, and Dr. Snyder.

Credit 6 units.

The purpose of this course is to teach the principles involved in the laboratory study of certain rickettsiae and viruses which are of direct concern to public health workers. The course consists of lectures, seminars, demonstrations, supervised individual work, and laboratory exercises. The latter include the isolation and identification of representative species of rickettsiae and viruses, the performance of diagnostic serological tests, and the preparation of diagnostic antigens.

The arthropods which are vectors or reservoirs of the major viral and rickettsial diseases are briefly considered at appropriate points in the exercises.

The course is planned as a basic preparation for investigations of rickettsiae or viruses either in the laboratory or the field.

Limited to ten students who have completed Microbiology 11b or who have had equivalent previous preparation.

Microbiology 15a, b, c, d. Problems in Serology

Laboratory exercises. Time and credit to be arranged. Dr. Murray and Dr. Chang.

Laboratory exercises on certain phases of current serologic technics are offered to students who have had adequate previous laboratory experience.

Prerequisite: Microbiology 11b, or the equivalent.

Microbiology 20. Research

Properly qualified students may do research in the laboratories of the Department. Time and credit to be arranged with the head of the Department.

DEPARTMENT OF NUTRITION

Fredrick J. Stare, s.m., ph.d., m.d,. a.m. (hon.), *Professor of Nutrition* and *Head of the Department*

David M. Hegsted, s.m., ph.d., *Associate Professor of Nutrition*

Robert P. Geyer, s.m., ph.d., *Assistant Professor of Nutrition*

George V. Mann, a.b., s.d., m.d., *Assistant Professor of Nutrition*

Jean Mayer, b.a., ph.d., d.sc., *Assistant Professor of Nutrition*

Martha F. Trulson, s.b., m.p.h., s.d. in hyg., *Assistant Professor of Nutrition*

Norman Zamcheck, a.b., m.d., *Instructor in Medicine*

Nutrition 1a. Public Health Nutrition

Lectures. *Tuesdays, Thursdays and Saturdays, 9–10, first period.* Dr. Stare and associates.

Credit 1.5 units.

This course deals with the practical application of the science of nutrition to the problems of human nutrition, especially in the field of public health.

Dietary requirements are considered in their relation to growth, development, disease, pregnancy, lactation, and the formation and maintenance of dental structures. Methods for establishing the minimum and optimum nutritional requirements, together with the problems of meeting these requirements, especially for low income groups, are discussed. The purposes and value of nutrition surveys are discussed along with methods of procedure and evaluation of measurements obtained. The place of the nutritionist in the public health program is considered and various fields of a well-rounded nutrition service are discussed as it correlates with the activities of health, welfare, educational, and industrial organizations. The effect of various environmental, social, economic, and psychologic factors upon food habits is also studied as these factors influence the nutritional status of an individual or group of people. The consequences of nutritional deficiencies and the relation of optimum nutrition to national and international health and economy are discussed. The nutritional problems of relief, rehabilitation, famine, and other emergencies are dealt with. The relation of production, distribution, and preparation for the best use of foods is discussed, as are also the problems of food enrichment and fortification.

Nutrition 2b, c. Biochemistry and Physiology of Nutrition

Lectures. *Tuesdays, Thursdays and Saturdays, 9–10, second period; Mondays, Wednesdays, and Fridays, 9–10, third period; and three hours per week, time to be arranged with the instructors.* Dr. Hegsted and Dr. Mayer.

Credit 4.5 units.

This course deals with the fundamentals of the chemistry and physiology of nutrition. The chemistry, function, and metabolism of carbohydrates, fats, proteins, vitamins and essential minerals are considered. The course is planned for those specializing in nutrition and who have adequate training in biochemistry and physiology.

Prerequisite: Organic and biological chemistry, physiology, and consent of instructors.

Nutrition 3c, d. The Laboratory Basis of Nutrition

Lectures and demonstrations. *Fridays, 10–12, and individual laboratory work to be arranged, third and fourth periods.* Dr. Geyer.

Credit 2 units.

This course is a survey of methods pertinent to experimental nutrition. The material covered includes biophysical and chemical technics used in nutritional studies in animal and human experimentation. Students participate in the preparation and presentation of such general topics as chromatography, spectroscopy, microbiological assay, manometric measurements, and purified

diet technics. They are then instructed in the actual laboratory procedure pertaining to these technics.

Prerequisites: A basic course in biochemistry and consent of instructor.

Nutrition 4c. Dietary Evaluation

Lectures and laboratory exercises. *Wednesdays, 11–1, third period.* Dr. Trulson.

Credit 1 unit.

Methods for obtaining a diet history are discussed and illustrated. The origins, accuracy, and use of food composition tables are considered and their use in translation of the diet history into equivalent food values is illustrated. The principles of diet therapy are discussed. Representative examples of common medical problems such as hypertension, obesity, diabetes, nephritis, and gastrointestinal disease are discussed with description of principles and application of diet therapy. Nutrition surveys are discussed. Laboratory work will consist of practical exercises in evaluating diets.

Nutrition 5d. Human Nutritional Disease

Lectures. *Mondays, Wednesdays and Fridays, 12–1, fourth period.* Dr. Mann.

Credit 1.5 units.

The emphasis in this course is upon (a) the clinical manifestations of nutritional diseases, (b) the implication of nutrition in the etiology of other than nutritional diseases, and (c) the application of diet and food supplements as therapeutic measures in clinical medicine.

Nutrition 6a, 6b. Nutrition Seminar

Seminars. *Thursdays, 4–5, first and second periods.* Staff of the Department.

Credit .5 unit in each period.

Brief discussions of classical literature in fundamental and applied nutrition. Admission limited and subject to the approval of the instructor. In addition, a journal club covering current literature and organized with the participation of the students meets informally on a day to be announced later.

Nutrition 7c, 7d. Advanced Topics in Nutrition

Seminars. *Thursdays, 4–5, third and fourth periods.* Staff of the Department.

Credit .5 unit in each period.

Properly qualified students present a topic followed by discussion.

Prerequisites: Nutrition 2b and consent of instructor.

Nutrition 20. Research in Nutrition

Time (at least two half-days per week) and credit to be arranged. Staff of the Department.

Facilities are available for advanced work in nutrition along the lines of fundamental research in nutrition and applied nutrition in public health and medicine.

Admission limited and subject to approval of the instructor.

DEPARTMENT OF PUBLIC HEALTH PRACTICE

Hugh R. Leavell, s.b., m.d., dr.p.h., *Professor of Public Health Practice* and *Head of the Department*

Franz Goldmann, m.d., *Associate Professor of Medical Care*

Leonid S. Snegireff, m.d., dr.p.h., *Associate Professor of Cancer Control*

Helen L. Roberts, a.b., m.d., m.p.h., *Lecturer on Public Health Practice*

Benjamin D. Paul, a.b., ph.d., *Lecturer on Social Anthropology*

Alfred L. Frechette, m.d., m.p.h., *Assistant Professor of Public Health Practice* and *Director, Health, Hospital and Medical Care Division, United Community Services of Metropolitan Boston*

Norbert A. Wilhelm, s.b., m.d., *Assistant Professor of Public Health Practice* and *Director, Peter Bent Brigham Hospital*

W. Fred Mayes, s.b., m.d., m.p.h., *Assistant Professor of Public Health Practice* and *Health Officer, Town of Brookline, Massachusetts* (Absent 1954–55)

Beryl J. Roberts, ed.m., m.p.h., *Assistant Professor of Health Education*

Margaret L. Varley, s.b., m.p.h., *Assistant Professor of Public Health Nursing*

Warren T. Vaughan, Jr., s.b., m.d., *Assistant Professor of Mental Health* and *Director, Division of Mental Hygiene, Massachusetts Department of Mental Health*

John H. Cauley, m.d., m.p.h., *Lecturer on Public Health Practice* and *Commissioner of Public Health, City of Boston Health Department*

Leon Sternfeld, s.b., m.d., ph.d., m.p.h., *Lecturer on Public Health Practice* (Absent 1954–55)

Gerald Caplan, b.sc., m.b.,ch.b., m.d., *Lecturer on Mental Health*

Frederick W. L. Richardson, Jr., s.b., ph.d., *Lecturer on Human Relations*

Claire F. Ryder, a.b., m.d., m.p.h., *Lecturer on Geriatrics*

Ozzie G. Simmons, s.b., ph.d., *Lecturer on Social Anthropology*

Howard A. Rusk, a.b., m.d., s.d. (hon.), *Visiting Lecturer on Public Health Practice*

William S. Stone, s.m., m.d., ph.d. (hon.), *Visiting Lecturer on Public Health Practice*

Edwin F. Daily, m.d., *Visiting Lecturer on Medical Care*

ROY F FEEMSTER, A.B., M.D., DR.P.H., *Instructor in Public Health Practice* and *Director, Division of Communicable Diseases, Department of Public Health of Massachusetts*

HERBERT L. LOMBARD, A.B., M.D., M.P.H., *Instructor in Public Health Practice* and *Director, Division of Cancer and Other Chronic Diseases, Department of Public Health of Massachusetts*

ROBERT E. ARCHIBALD, M.D., M.P.H., *Instructor in Public Health Practice* and *Deputy Commissioner, Department of Public Health of Massachusetts*

ARTHUR E. BURKE, S.B., M.D., M.P.H., *Instructor in Public Health Practice* and *District Health Officer, Department of Public Health of Massachusetts*

FRANKLYN B. AMOS, M.D., M.P.H., *Instructor in Public Health Practice*

DEAN W. ROBERTS, A.B., M.D., M.P.H., *Instructor in Medical Care*

CLARENCE I. STERLING, S.B., *Instructor in Public Health Practice* and *Deputy Commissioner of Health, Department of Public Health of Massachusetts*

KENNETH I. E. MACLEOD, M.B.,CH.B., M.P.H., *Instructor in Public Health Practice*

ELIZABETH B. HAGER, A.B., N.M., A.M., *Instructor in Public Health Nursing*

BROOKS RYDER, A.B., M.D., M.P.H., *Instructor in Public Health Practice*

SIDNEY LISWOOD, A.B., M.B.A., M.P.H., *Instructor in Medical Care* and *Associate Administrator, Beth Israel Hospital*

OLIVE M. LOMBARD, B.SC., S.M. IN HYG., *Instructor in Public Health Practice*

JEAN C. AVERY, A.B., M.D., M.P.H., *Instructor in Public Health Practice*

ALEXANDER WITKOW, S.B., M.D., M.P.H., *Instructor in Public Health Practice*

AMY GREENE, A.B., *Instructor in Public Health Social Work*

DONALD C. KLEIN, A.B., PH.D., *Instructor in Mental Health*

ARTHUR C. K. HALLOCK, A.B., *Instructor in Mental Health*

FRANCIS P. DAWSON, M.D., M.P.H., *Instructor in Public Health Practice* and *Superintendent of Middlesex County Sanatorium*

MARY L. FOSTER, S.B., A.M., *Instructor in Mental Health*

EDWARD A. MASON, A.B., M.D., *Instructor in Mental Health*

HOWARD J. PARAD, A.B., S.M., *Instructor in Mental Health*

SUZANNE T. VAN AMERONGEN, M.A., M.D., *Research Associate in Mental Health*

PEARL P. ROSENBERG, PH.D., *Research Associate in Mental Health*

KATHERINE SPENCER, PH.D., *Research Associate in Public Health Practice*

LENA M. DICICCO, A.B., S.M., *Research Associate in Health Education*

NAOMI C. TURNER, A.B., ED.M., *Research Associate in Dental Public Health*

D. DORRIAN APPLE, A.M., *Research Associate in Sociology*

JAMES A. DAVIS, S.M., *Research Associate in Public Health Practice*

NATALIE K. VALLEE, S.B., ED.D., *Research Fellow in Mental Health*

A. Paul Hare, s.b., ph.d., *Research Fellow in Mental Health*

Alma E. Amoroso, s.b., *Assistant in Public Health Practice*

Marie G. McConnell, *Assistant in Public Health Practice*

Erich Lindemann, ph.d., m.d., *Professor of Psychiatry*

James M. Dunning, a.b., d.d.s., m.p.h., *Lecturer on Dental Public Health, Harvard School of Dental Medicine*

Dean A. Clark, b.a., b.sc., m.d., *Clinical Professor of Preventive Medicine* and *General Director of the Massachusetts General Hospital*

Paul K. Losch, d.d.s., *Associate Professor of Pediatric Dentistry at the Children's Hospital*

Shields Warren, a.b., m.d., s.d. (hon.), ll.d., *Professor of Pathology at the New England Deaconess Hospital*

F. William Marlow, Jr., s.b., m.d., *Clinical Associate in Medicine*

Henry H. Brewster, m.d., *Instructor in Psychiatry*

LeMoyne White, a.b., m.d., *Instructor in Psychiatry*

Robert H. Hamlin, a.b., m.d., m.p.h., ll.b., *Instructor in Legal Medicine* and *Health Officer, Town of Brookline*

The general objective of the Department of Public Health Practice is to develop plans and procedures for the administration of public health programs in governmental and in voluntary health agencies. Work is based on other courses given in the school and the general background of knowledge in the natural and physical sciences and the behavioral sciences, and is conducted through lectures, seminars, work shops, independent investigation and field observations.

One course in the Department, Public Health Practice 1b, is required of all candidates for the Master of Public Health degree. Other courses are elective although it is anticipated that all majors in public health practice will take Public Health Practice 10c, d and the accompanying field work, Public Health Practice 30c. Most students majoring in the field of public health practice should also take Public Health Practice 2b, Organization of Medical Care.

Special curricula are designed for health officers, cancer control administrators, medical care administrators, mental health workers, veterinary public health workers, dental public health workers, public health nurses and health educators.

Public Health Practice 1b. Principles of Public Health Practice

Seminars and conferences. *Mondays, Wednesdays and Fridays, 9–11, second period.* Dr. Leavell and associates.

Credit 3 units.

An introduction to public health practice in which the principles of understanding people, of administrative organization, personnel management, financing of health services and public health law are presented as the basis of public health administration.

Special consideration is given to the work of the various members of the public health team, and to the types and inter-relationships of the official and voluntary agencies in which they work.

Maternal and child services involve many members of the health team, and they are needed in all parts of the world. Therefore, examples of such services receive special emphasis.

Public Health Practice 2b. Organization of Medical Care

Lectures and discussions. *Tuesdays and Thursdays, 11–1, second period.* Dr. GOLDMANN.

Credit 2 units.

An orientation course on the development and present state of medical-care programs organized under the auspices of public and voluntary agencies. Discussion of the resources in medical and related personnel, and in hospitals, clinics, and custodial institutions; of the utilization of existing services and the cost of medical care; and of the basic methods of organizing and paying for professional and hospital services. Description of tax-supported medical-care programs administered by local, state, and federal agencies and of voluntary prepayment plans of various types.

Public Health Practice 3b. Psychosocial Problems

Lectures and seminars. *Wednesdays, 2–4, second period.* Dr. LINDEMANN and associates.

Credit 1 unit.

This course is concerned with the study of abnormal behavior resulting in social problems and with the mechanisms which produce abnormal mental reactions. Methods of handling these problems through community resources are discussed.

Public Health Practice 4a. Control of Cancer

Lectures and discussions. *Tuesdays and Thursdays, 11–1, first period.* Dr. SNEGIREFF.

Credit 2 units.

Cancer control is discussed from the viewpoint of the administrator. Authorities in the various aspects of the cancer control program discuss specific phases of the problem. Discussion periods are arranged to supplement lectures and to give the administrator a balanced view of the cancer field in clinical, research, and service aspects.

Public Health Practice 5a. Control of Tuberculosis

Lectures and field exercises. *Tuesdays and Thursdays, 2–4, first period.* Dr. Dawson.

Credit 2 units.

The bacteriology, pathology and epidemiology of tuberculosis are reviewed. The impact of economic, social and genetic factors upon the disease are considered. The approach is that of the administrator rather than that of the clinician, although specialists in various aspects of tuberculosis will lead some of the discussions. Field trips include visits to sanatoria, mass chest x-ray projects and tuberculosis clinics.

Public Health Practice 7c, d. Dental Public Health Practice

Conferences, seminars, and field study. Time and credit to be arranged. Dr. Dunning and associates.

This course is designed particularly for dentists.

Emphasis is laid on the application of such sciences as epidemiology and biostatistics to dental problems and upon public health administration in the dental field.

Opportunities for clinical experience are available at the Harvard School of Dental Medicine under certain circumstances.

Public Health Practice 8d. Veterinary Public Health Practice

Seminars. Time and credit to be arranged.

Discussion of advanced problems of veterinary public health practice, with particular reference to integration in the program of official and voluntary health agencies.

The course will not be given for less than ten students.

Public Health Practice 10c, d. Public Health Administration, Health Education, Public Health Nursing and Social Work in Health Agencies

Seminars and field study, *Mondays, Wednesdays and Fridays, 2–4, third and fourth periods.* Drs. Leavell and Frechette; Misses Roberts, Varley and Rice.

Credit 6 units.

Administration:

The practical application of public health principles is developed through case studies, surveys and field study in nearby communities. General administrative problems are discussed, as well as those in the fields of health education, public health nursing and social work. Students are assigned problems or

situations to study and report upon for class discussion. The importance of teamwork in public health is stressed.

Health Education:

The important role of each team member in health education is emphasized. Community-wide and special health education programs are described, and procedures and media studied.

Public Health Nursing:

Public health nursing in both official and voluntary agencies is emphasized with special attention to administrative needs and in relationship to the total community health program.

Social Work in Health Agencies:

The development of social work in health programs is reviewed, and through case material, the principles and methods of social work in health programs are discussed.

Public Health Practice 30c, d must be taken in connection with this course to provide opportunities for field study.

Prerequisite: Public Health Practice 1b.

Public Health Practice 11c, d. Administration of Medical-Care Programs

Seminars, field observations, and exercises. *Tuesdays and Thursdays, 11–1, third period; Tuesdays, 11–1, and Thursdays, 10–1, fourth period.* Dr. GOLDMANN.

Credit 4.5 units.

An advanced seminar enlarging on the basic subject matter presented in Public Health Practice 2b, Organization of Medical Care. Discussion of the basic principles and problems of sound administrative organization of medical-care programs. Study of the administrative practices actually followed by public agencies in charge of tax-supported services and by voluntary agencies administering prepayment plans for hospital care, physicians' service, or both. Discussion of the technics of surveying and appraising medical-care needs and medical-care programs, including consideration of proper employment of statistical methodology. Analysis of the experience gained in the operation of various types of tax-supported and insurance plans. Visits to selected medical-care facilities and to administrative agencies, public and voluntary. Supervised studies of typical organizations.

Prerequisite: Public Health Practice 2b.

Public Health Practice 30c, d must be taken in connection with this course to provide opportunities of field study.

Public Health Practice 13d. Hospital Organization and Community Relationships

Lectures and field exercises. *Wednesdays and Fridays, 11–1, fourth period.* Field trips to be arranged. Dr. WILHELM.

Credit 2 units.

This course is designed to give the health officer basic information on the organization and functions of the typical hospital and, especially, on its relationship to the various agencies engaged in health activities and to the community as a whole. No attempt is made to develop hospital administrators. The course deals with the responsibilities of a hospital administrator towards a health official who may have general charge of hospitals incorporated in his department. Therefore, emphasis is on fundamental problems, rather than on the details of hospital administration.

This course will not be given for less than ten students.

Prerequisite: Public Health Practice 2b.

Public Health Practice 14c, d. Mental Health Problems

Seminars. *Tuesdays, 2–4, third and fourth periods.* Dr. LINDEMANN.

Credit 2 units.

A series of discussions dealing with factors in individual development, family context, and social structure of the community which are relevant to emotional disturbances. Mental health problems, such as control of delinquency, mental disease, psychoneurosis, and psychosomatic disorders are reviewed, both from the point of view of the clinic and of community resources. An effort then is made to outline a program for community mental health, including the problems involved in the efforts of public agencies and voluntary groups.

Prerequisite: Public Health Practice 3b.

Public Health Practice 15c, d. Cancer Control Administration

Seminars and field study. Time and credit to be arranged. Dr. SNEGIREFF.

Discussion of advanced problems in administration of cancer control programs of official and voluntary health agencies at national, state, county, and community levels, and of statistical problems related to cancer etiology and cancer control.

Observation and field study in cancer diagnostic, combined diagnostic, and therapeutic clinics, cancer detection clinics, cancer hospitals, related activities, and facilities. This course is designed primarily for physicians who are concerned with state-wide cancer programs.

Prerequisite: Public Health Practice 4a.

Public Health Practice 16d. Control of Communicable Disease

Seminars. *Fridays, 9–11, fourth period.* Dr. Feemster and Dr. Philbrook.

Credit 1 unit.

This course is given jointly with the Department of Epidemiology. (See Epidemiology 6d.) Epidemiologic study of a disease problem is basic to its control; therefore Epidemiology 5c is a prerequisite. Specific problems and situations are studied from the administrative standpoint in this course. Attention is centered on elements of control programs desirable with personnel and facilities available in the given situations under study.

Prerequisite: Epidemiology 5c.

Public Health Practice 17d. Administration of Tropical Public Health Programs

Conferences and seminars. *Wednesdays, 11–1, fourth period.* Staffs of the Departments participating.

Credit 1 unit.

This is a joint course with the Department of Tropical Public Health. See Tropical Public Health 2d for description.

Public Health Practice 18d. Community Organization for Disaster

Lectures and seminars. *Mondays, 4–5, fourth period.*

Credit .5 unit.

An analysis of various types of disasters, such as floods, enemy action, etc., which may afflict a community causing a large number of casualties and displacing populations. The organization of a disaster plan, the handling of casualties through first aid and improvised hospitals, the problem of supplies, laboratory service and records are discussed. The place of environmental sanitation, including medical care of displaced populations and special problems such as biological and chemical warfare and atom bombing are included. The legal and financial aspects and the training of personnel are also included.

Public Health Practice 20. Special Assignments for Individual Work

Advanced students are offered the opportunity to undertake special studies in the practice of organized health services. The student must have completed Biostatistics 1a, b and Public Health Practice 1b before registering for this work.

FIELD STUDY IN PUBLIC HEALTH PRACTICE

Public Health Practice 30c, d. Field Observation

Thursdays, 2–5, third and fourth periods. Credit to be arranged.

These periods are designed to provide opportunity for field observations, individual field studies, and seminar discussions in health service administration, public health nursing, social work and health education. Students majoring in Public Health Practice or those electing either Public Health Practice 10c, d or 11c, d are required to register for this course, and may earn one or more units of credit.

Fourth period. Time and credit to be arranged.

Conferences in hospital administration designed for students who elect Public Health Practice 13d and for certain others who are interested in attending daily administrative conferences at the Peter Bent Brigham Hospital. Limited to five students.

Public Health Practice 31c, d. Assignments to Field Agencies

January 31–February 5, April 4–9.

Credit 1 unit for each week.

Assignments for continuous periods to health departments or voluntary health agencies (1) To observe activities of the various subdivisions, work of the administrator or other specialized administrative personnel, and community relationships, or (2) To make group surveys or studies of community health services under the supervision of staff members of the Department of Public Health Practice.

Offered in conjunction with Public Health Practice 4a, 5a, 10cd, 11cd, 13d, 14cd and 15cd.

Public Health Practice 32b, 32c, 32d. Introduction to Community Health Practice

Day to be arranged, 2–5, Whittier Street Health Center.

Credit 1 unit each period.

An opportunity for a limited number of students to study for an eight week period the health and welfare resources of an urban community under the guidance of the field unit staff through the case study method.

SPECIAL COURSES

Public Health Practice 40c, d. Group Dynamics

Lectures and seminars. Two hours a week, time to be arranged, during the third and fourth periods. Dr. Pearl Rosenberg.

Credit 2 units.

The study of group dynamics is designed to increase awareness of the human relationships occurring within a group and thereby to improve the efficiency of the health worker. Lectures and informal group discussions, which constitute the laboratory part of the course, give the student an opportunity to become conscious of such concepts as group process, group cohesion, productivity, leadership, group structure and communication.

Public Health Practice 41c, d. Gerontology

Seminars. Two hours a week, time to be arranged, during the third and fourth periods. Staffs of the Departments participating.

Credit 2 units.

This series of seminars offers an opportunity for detailed study of gerontological problems briefly touched upon in other courses. Its general theme is the social and biological challenge of the aging population. Discussions will cover the biological changes in old age, the emotional problems of the aged, the problems of the older worker in industry and retirement, the socio-economic factors in old age, and the control of selected diseases of long duration. At least four sessions will be devoted to the principles of planning a community program for the aged.

Public Health Practice 42c, d. Legal Problems of Organized Health Service

Seminars. Two hours a week, time to be arranged, during the third and fourth periods. Dr. Hamlin, in cooperation with Assistant Professor Sacks, Harvard Law School.

Credit 2 untis.

This seminar is designed to analyze, critically but constructively, the various laws affecting establishment and operation of organized health service programs, both official and voluntary. It is open to students from the Law School in order to stimulate interchange of ideas and cooperative efforts to solve legal problems in the field of health.

DEPARTMENT OF PHYSIOLOGY

James L. Whittenberger, s.b., m.d., *Professor of Physiology* and *Head of the Department*

Stanley J. Sarnoff, a.b., m.d., *Associate Professor of Physiology*

Benjamin G. Ferris, Jr., a.b., m.d., *Assistant Professor of Physiology*

Jere Mead, s.b., m.d., *Assistant Professor of Physiology*

Edward P. Radford, Jr., m.d., *Associate in Physiology*

Willem S. Frederik, m.d., s.m. in hyg., *Lecturer on Physiology*

David B. Dill, s.b., ph.d., *Visiting Lecturer on Physiology*

Austin F. Henschel, s.b., ph.d., *Visiting Lecturer on Physiology*

Harben J. Boutourline-Young, m.b.,b.s., m.d., *Research Associate in Physiology* (Absent 1954–55)

William H. Forbes, dr.phil., m.d., *Research Associate in Physiology*

Erik Berglund, a.b., m.d., *Research Associate in Physiology*

Robert B. Case, a.b., s.b., m.d., *Research Associate in Physiology*

Neville M. Lefcoe, b.sc., m.d., *Research Fellow in Physiology*

Hans G. Borst, m.d., *Research Fellow in Physiology*

Physiology 1a, b. Human Physiology and Its Application to Public Health

Lectures and demonstrations. *Tuesdays and Thursdays, 1–2, first and second periods.* Dr. Whittenberger and associates.

Credit 2 units.

A course in human physiology, with particular emphasis on the systems and reactions of the body which are of major importance in public health problems. The course is designed primarily for students of engineering sciences; it is recommended also to those who need additional physiologic background for work in other fields. The course is prerequisite to Physiology 2c, d for those who lack adequate training in physiology.

Physiology 2c, d. Environmental Physiology

Lectures and conferences. *Tuesdays and Thursdays, 12–1, third and fourth periods.* Dr. Whittenberger and associates.

Credit 2 units.

The physical aspects of man's surroundings have definite and sometimes critical effects on his health and productivity. These effects can be observed universally, but are of special importance in industry, where large numbers of people are exposed to extremes of factors such as heat, barometric pressure, radiation, and atmospheric contamination.

One of the purposes of physiology instruction in public health is to provide information on the physiologic reactions of man to his environment, as a basis for understanding of environmental health problems and their control.

In considering atmospheric contaminants, special attention will be given to pulmonary diseases, which continue to present some of the most serious medical problems in industry. Recent developments in pulmonary physiology have greatly improved differential diagnosis, evaluation of disability, and therapy. The course will consider pulmonary and cardiac function tests, as well as resuscitation and other practical physiologic problems in industry.

Physiology 20. Research in Physiology

Properly qualified students are given opportunities to work in the laboratory provided they can devote an acceptable amount of time to such work.

DEPARTMENT OF SANITARY ENGINEERING

GORDON M. FAIR, S.B., S.M. (hon.), DR. ING. (hon.), *Abbott and James Lawrence Professor of Engineering, Gordon McKay Professor of Sanitary Engineering* and *Head of the Department*

EDWARD W. MOORE, A.M., *Associate Professor of Sanitary Chemistry*

HAROLD A. THOMAS, JR., S.D., *Associate Professor of Sanitary Engineering*

SHIH L. CHANG, M.D., DR.P.H., *Associate Professor of Sanitary Biology*

J. CARRELL MORRIS, S.B., PH.D., *Associate Professor of Sanitary Chemistry*

Sanitary Engineering 1a, b. Principles of Sanitation

Lectures and demonstrations. *Tuesdays, Thursdays, 10–11, and Saturdays, 10–12, first and second periods.* Professors FAIR, DRINKER and YAGLOU, Associate Professors MOORE and SILVERMAN, Dr. CHANG.

Credit 4 units.

This course is entitled Principles of Sanitation, and endeavors to live up to the name by emphasizing the broad engineering principles useful in environmental control. An attempt is made to present these principles in a manner comprehensible to students who have no engineering background. Technics of control are discussed, but are presented as illustrations of principle, not as rule-of-thumb procedure which the student is expected to learn by rote. A few field visits are made to show the application of principles in practice.

The ultimate objective of the course is not the conversion of the student into a sanitation expert, ready to design a water plant, eliminate rats, or prescribe a ventilation system, but rather to prepare him to supervise, to cooperate with, and to understand the people who are to do the job. It also

acquaints him with the nature and extent of the problem, with what can be and has been accomplished by sanitation, and with what may be expected to be accomplished in the future.

The topics considered include: water supply and purification; sewerage and sewage treatment; refuse collection and disposal; food, milk and shellfish sanitation; arthropod and rodent control; ventilation and air conditioning; noise control; illumination.

Sanitary Engineering 2a, b. Sanitary Bacteriology

Lectures and laboratory. *Tuesdays, Thursdays and Saturdays, 8–9 and Wednesdays 1–5, first and second periods.* Dr. CHANG.

Credit 5 units.

Morphology, physiology, and cultivation of bacteria. Quantitative bacteriology. Effect of physical and chemical agents on bacteria. Mechanisms of antibacterial activity. Differentiation of Enterobacteriaceae. Immunity. Bacteriology and sanitary control of air, water, and swimming pools. Viruses.

This is the same course as Engineering 274a.

Sanitary Engineering 3c, d. Sanitary Bacteriology and Parasitology

Lectures and laboratory. *Mondays, Wednesdays and Fridays, 8–9, and Tuesdays, 9–1, third and fourth periods.* Dr. CHANG.

Credit 5 units.

Soil and sewage microbiology. Bacteriology and sanitary control of milk and milk products, foods and eating establishments, and shellfish. Parasitology and control of diseases caused by zoological parasites. Arthropods of public health importance and their control. Rodents and rodent control.

This is the same course as Engineering 274b.

The following courses of instruction offered in the Division of Applied Science of the Graduate School of Arts and Sciences are open to properly qualified students:

Engineering 270a. Hydrology and Hydraulics of Water Supply and Waste-Water Disposal. Professor FAIR.

Engineering 270b. Physics and Hydraulics of Water and Waste-Water Treatment. Professor FAIR.

Engineering 271. Chemistry and Biology of Water Supply. Associate Professor MOORE.

Engineering 272a. Sanitary Chemistry: Analytical. Associate Professor MORRIS.

Engineering 272b. Sanitary Chemistry: Physical and Nuclear. Associate Professor MORRIS.

Engineering 273. Chemistry and Biology of Waste-water Disposal. Associate Professor THOMAS.

Engineering 275. Industrial Water Supply and Waste-water Disposal. Associate Professor MOORE.

Engineering 276. Instrumental Techniques in Water and Waste-water Analysis. Associate Professor MORRIS.

Engineering 277. Engineering Applications of Colloidal and Surface Chemistry. Associate Professor MORRIS.

DEPARTMENT OF TROPICAL PUBLIC HEALTH

JAMES S. SIMMONS, S.B., M.D., PH.D., DR.P.H., S.D. (hon.), *Professor of Public Health*

GEORGE C. SHATTUCK, A.B., M.D., A.M. (hon.), *Clinical Professor of Tropical Medicine, Emeritus*

THOMAS H. WELLER, A.B., S.M., M.D., *Richard Pearson Strong Professor of Tropical Public Health* and *Head of the Department*

DONALD L. AUGUSTINE, S.B., S.D., S.D. (hon.), A.M. (hon.), *Professor of Tropical Public Health*

QUENTIN M. GEIMAN, S.M., PH.D., *Associate Professor of Tropical Public Health*

JUSTIN M. ANDREWS, PH.B., S.D. (hon.), *Visiting Lecturer on Tropical Public Health*

PAUL F. RUSSELL, A.B., M.D., M.P.H., *Visiting Lecturer on Tropical Public Health*

EDWARD I. SALISBURY, M.D., *Visiting Lecturer on Tropical Public Health*

FRED L. SOPER, A.B., S.M., M.D., DR.P.H., *Visiting Lecturer on Tropical Public Health*

GEORGE M. SAUNDERS, A.B., M.D., *Visiting Lecturer on Tropical Public Health*

LEWIS W. HACKETT, A.B., M.D., DR.P.H., *Visiting Lecturer on Tropical Public Health*

WILLARD H. WRIGHT, D.V.M., S.M., PH.D., *Visiting Lecturer on Tropical Public Health*

HENRY VAN ZILE HYDE, A.B., M.D., *Visiting Lecturer on International Health*

JACQUES M. MAY, M.D., *Visiting Lecturer on Tropical Public Health*

SAMUEL W. SIMMONS, S.B., PH.D., *Visiting Lecturer on Tropical Public Health*

ELI CHERNIN, S.B., A.M., S.D., *Instructor in Tropical Public Health*

CHARLES E. BECKER, PH.D., *Research Associate in Tropical Public Health*

CHIA-TUNG PAN, B.SC., M.D., M.P.H., *Research Associate in Tropical Public Health*

EDWARD H. MICHELSON, S.M., *Assistant in Tropical Public Health*

JOHN H. HANKS, S.B., PH.D., *Lecturer on Bacteriology and Immunology*

Students wishing to concentrate in Tropical Public Health must possess a knowledge of pathology, in addition to the basic course requirements for admission as degree candidates.

Tropical Public Health 1c, d. Conservation of Health in Tropical Countries

Lectures, laboratory exercises, and demonstrations. *Tuesdays and Thursdays, 2–5, third and fourth periods.* Dr. WELLER, Dr. AUGUSTINE, Dr. GEIMAN, and associates.

Credit 5 units.

This course deals with the important health hazards of tropical regions. It is concerned with the numerous factors which combine to exert a deleterious effect on human welfare and efficiency in tropical countries. These include climate, environment, food supply, density of population, social and economic conditions, and the more serious disease problems of the tropics. The clinical aspects of tropical medicine are not neglected, but the main emphasis will be placed on the recognition of diseases and their prevention or control. Special consideration is given to recent advances in our knowledge of the insect-borne diseases, including their distribution and incidence, host-parasite relations, and the best methods available with which to protect both the individual and the community against their attack.

The content of this course is contingent upon an adequate background in the pre-clinical medical sciences, especially histology and pathology. Students who lack training in these disciplines will be admitted only subject to the approval of the Head of the Department.

Tropical Public Health 2d. Administration of Tropical Public Health Programs

Lectures and conferences. *Wednesdays, 11–1, fourth period.* Staffs of the Departments participating.

Credit 1 unit.

This course is given jointly with the Department of Public Health Practice (see Public Health Practice 17d). It is designed to acquaint the students with administration of public health programs in tropical countries. Formal presentation of subjects dealing with actual health conditions and problems in representative tropical regions will be made by visiting lecturers. These will be followed by informal conferences in which the students will be expected to participate. Careful consideration will be given to the possibility of devel-

oping more effective tropical health programs through application of administrative technics adapted to the needs of different peoples and climates. Registration is open to all students but admission for credit is subject to the approval of the Head of the Department.

Tropical Public Health 4d. International Aspects of Tropical Public Health

Conferences. *Mondays, 11–1, fourth period.* Dean Simmons.

Credit 1 unit.

These conferences are available to a small group of selected students interested in the broader aspects of tropical public health, with special reference to specific problems that have an important bearing on international health. Conferences are informal and the students are expected to take an active part in all of the discussions, which are limited to international problems of current interest. Admission is by permission of the instructor.

Tropical Public Health 5c, d. Seminar in Tropical Public Health

Seminars and discussions. One hour session twice a month throughout the third and fourth periods. Time to be arranged. Staff of the Department.

Credit .5 unit.

Students particularly interested in Tropical Public Health will meet with the staff members for the presentation and discussion of current literature and original investigations.

Prerequisite: Tropical Public Health 1c, d or its equivalent.

Tropical Public Health 6b. Parasitology

Lectures, laboratory exercises, and demonstrations. *Tuesdays, Thursdays and Saturdays, 10–1, December 2–18.* Dr. Weller, Dr. Augustine, Dr. Geiman, and associates.

Credit 1.5 units.

This course is designed primarily for students in the School of Medicine. It is open, however, to a limited number of students registered in the School of Public Health who wish to review the subject. The important helminth and protozoan parasites of man are considered with reference to their geographic distribution, identification, mode of transmission, pathogenesis, immune reactions, and methods for prevention and control. Clinical aspects and chemotherapy of parasitic diseases are discussed. Emphasis is given to methods of laboratory diagnosis. Arthropods of parasitologic importance are briefly surveyed with special consideration of insects related to human disease.

Tropical Public Health 20. Research

Opportunity is offered to qualified students to work on problems in tropical public health under the supervision of the staff. An extensive number of

parasites of medical importance are maintained for studies on metabolism, nutrition, host-parasite relations, and chemotherapy. Arrangements may be made for students to work in laboratories of hospitals situated within the tropics or to cooperate in organized field investigations.

Tropical Public Health 40d. Laboratory Technics

Conferences and laboratory. Staff of the Department.

Time and credit to be arranged.

Students are offered the opportunity to learn laboratory technics in handling parasitic infections in cultures and in laboratory animals, and to gain experience in routine laboratory diagnosis.

Prerequisite: Enrollment in Tropical Public Health 1c, d.

GENERAL INFORMATION

Registration

Registration in the School of Public Health for the academic year 1954–55 is from Monday, September 20 to Friday, September 24. A faculty advisor is assigned to each student to consult with him about his selection of courses and to advise him throughout the year. Adequate time during registration week should be allowed by the student for discussion of his program with his advisor and the Dean or Assistant Deans of the School, who must approve each schedule.

All students who are not citizens of the United States will be referred before registration to the Counsellor for Foreign Students, 24 Quincy Street, Cambridge, where they will present a statement of admission, show their passports, and fill out a Student Registration form. They will then receive a card for presentation at registration, showing they have been cleared by the office of the Counsellor for Foreign Students.

Veterans

Information about the procedure to be followed by students who are eligible for educational benefits under either of the G.I. Bills or the Rehabilitation Bill, may be secured from the Secretary of the School or from the Veterans Affairs Section of the Comptroller's Office, Lehman Hall, Cambridge.

Housing

There are no dormitories for students of the School of Public Health but they may get their meals at Vanderbilt Hall dining room, the Medical School dormitory. Single students usually can find furnished rooms or apartments in the vicinity of the School, or in nearby residential sections such as Brookline. Houses or apartments for families are more difficult to obtain and therefore married students who plan to bring their families are advised to arrive in Boston at least three weeks in advance of the opening of School, in order to have time to secure living quarters. The School is glad

to be of assistance by supplying information about available places, but the responsibility for securing housing rests with the students.

Fees and Expenses

The fee for tuition for each academic year is $1,150 for all full-time students. For part-time students the fee varies according to the courses taken and is based on the proportion of the annual fee for instruction which the credit units for each course bear to the total number of credits necessary for the degree of Master of Public Health, plus $5.00 for each course. For example, a part-time student taking a course with a credit unit value of 2 would pay a tuition fee of $62.50; a student taking a course with a credit unit value of 4 would pay $120.00.

The fees required of candidates for the degrees of Master of Science in Hygiene, Doctor of Science in Hygiene, and Doctor of Public Health will be prorated according to the course credits (including research courses) taken in any year on the same basis as mentioned above for part-time students working for the degree of Master of Public Health, but the total amount of fees paid toward any degree must equal the minimum residence tuition requirement for the specific degree. The $5.00 course fees required of part-time students are not included as prorated credit fees. Students who have completed the course work and the residence requirement for any degree, or have paid a total of two years' full tuition toward the doctorate (at least one of which is subsequent to the completion of work equivalent to the requirements for the master's degree) and still have degree requirements to be fulfilled, shall pay, for a period which shall not ordinarily extend beyond two additional years, a tuition fee of half-rate per year for full-time work, and in proportion for less than full-time work. Residence is interpreted to mean that an individual is registered as a student and is using one or more of the facilities of the University. Residence may be completed on a part-time basis in proportion to the amount of fees paid relative to the total fee required to fulfill the minimum residence requirement, but in no case shall the tuition fee be less than $50 per half-year for students, either part-time or full-time, who are in residence. A fee

of $25 per half-year shall be charged for any student completing degree requirements away from Harvard University.

Each full-time student will be charged a medical and hospital fee of $50 per year. Part-time students working at the *rate* of substantially half-time or less and living at home may be excused from the payment of such fee at any time within two weeks after their registration, upon the recommendation of the Dean.

Bills for tuition and fees will be issued and payable as follows:

Issued	*Payable*	
At registration		¼ of the tuition for the year ½ medical and hospital fee for the year
Nov. 22	Dec. 10	¼ of the tuition for the year board through October 31 miscellaneous charges
Jan. 20	Feb. 10	¼ of the tuition for the year ½ medical and hospital fee for the year board through December 31 miscellaneous charges
April 20	May 10	¼ of the tuition for the year board through March 31 miscellaneous charges
June 8 *	June 15	board to the end of the year miscellaneous charges
June 30	July 15	board to the end of the year miscellaneous charges

Students who are candidates for degrees must have paid all dues to the University at least one day before the day upon which the degrees are to be voted. A student who leaves during the year is charged to the end of the tuition period in which he leaves provided before that time he gives the Dean notice in writing of his withdrawal; otherwise he is charged to the end of the tuition period in which such notice is given.

A student who leaves the University for any reason whatever

* Applies only to candidates for degrees.

must pay all charges against him immediately upon receipt of a bill from the Bursar. Every student will be held responsible for the payment of fees until he has notified the Dean of his intention to withdraw from the School.

All term bills will be sent to the student at his local address unless the Bursar is requested in writing to send them elsewhere.

Any student whose indebtedness to the University remains unpaid on the date fixed for payment is deprived of the privileges of the University until he is reinstated. Reinstatement is obtained only by consent of the Dean of the School in which the student is enrolled, after payment of all indebtedness, and a fine of $10 for late payment.

Bond Requirement

Upon entrance to the School every student is required to file with the Bursar a bond in the sum of $500 as security for payment of University bills. The bond must be signed by two bondsmen, both of whom must be citizens of the United States, or by a surety company duly qualified to do business in Massachusetts. No officer or student of the University will be accepted as a bondsman and in no case will more than one parent be accepted. In lieu of the bond a student may deposit with the Bursar $500 in United States Treasury coupon-bearing bonds, or $500 in cash, which will bear no interest. Blank forms of bonds may be obtained at the Dean's office or from the Bursar.

Student Health Service

Under a new plan students in the School will receive medical and hospital services from the Peter Bent Brigham Hospital, adjacent to the School, at a fee of $25.00 per term. All full-time students will be required to pay the fee, with the exceptions noted below. This entitles the student to medical advice and treatment and necessary hospitalization, including ancillary service such as laboratory and x-ray.

Since the hospitalization will be provided under a contract with Blue Cross, hospitalization will be available not only in Boston but

elsewhere and the hospital benefits will run for a full twelve-month period.

Students who already have Blue Cross coverage may be able to transfer their contracts to the University plan and receive credit from Blue Cross for unused premiums.

Army, Navy, Air Force and Public Health Service officers will pay only the part of the fee to cover office and home care and their hospitalization will be provided by the services of which they are members.

Every new student paying the medical fee is required to undergo a complete medical examination. This is done by designated appointment, shortly after admission to the School.

Evidence of having been satisfactorily vaccinated is required for entrance to Harvard University and a form for certification for this purpose is sent to each student who is accepted for admission.

Any illness necessitating absence from classes should be reported to the Student Health Office by the student, or an attending physician, and to the Information Office at the School.

In order to cope with the rather strenuous schedule of work imposed by the School, it is essential that students be in excellent physical and mental health. Prospective students are urged to undergo a thorough examination to satisfy themselves of their fitness before making arrangements to enter the School.

Scholarships and Fellowships

A limited number of Harvard School of Public Health Scholarships have been awarded for the 1954–55 academic year. These Scholarships, granted on the basis of the professional promise and financial needs of the individual applicants, are the first ever to be given in the name of the School of Public Health.

The School plans to continue this new Scholarship Program for the 1955–56 academic year. Funds for the Program are limited, and therefore Scholarship applicants are advised to seek financial aid from other sources.

Before an applicant can be considered for a Harvard School of Public Health Scholarship, he must first be approved for admission

to the School. The deadline for filing Scholarship applications for the year 1955–56 will be March 1, 1955. Scholarship awards will be announced by May 1, 1955. Admission and Scholarship application forms may be obtained by writing The Secretary, Harvard School of Public Health, 55 Shattuck Street, Boston 15, Massachusetts.

In addition to the Harvard School of Public Health Scholarships, there are a few General University Scholarships and Fellowships which, under the terms of the original gift to the University, may be awarded to students in any part of the University, including the School of Public Health. Most of these are for persons from a particular city, state or country, for persons interested in a particular subject and for persons with other special qualifications. Applications for these scholarships must be submitted, through the School of Public Health, by February 1st of the year preceding the academic year for which the award is desired. A pamphlet describing these University Scholarships may be obtained by writing The Secretary of the School of Public Health at the above address.

STUDENTS, 1953–54

Degree Candidates and Full-Time Special Students

Alexander, Ross D., S.B.	Modesto, Calif.
Alousi, Majid A., M.B.,CH.B.	Baghdad, Iraq
Assar, Jalal, M.D.	Tehran, Iran
Autry, Doris B., D.V.M.	Doraville, Ga.
Babbott, Frank L., Jr., A.B., M.D., M.P.H.	Bernardsville, N. J.
Babbott, Joan G., A.B., M.D.	Bernardsville, N. J.
Baker, Hinton J., S.B., M.D.	Washington, D. C.
Bates, Margaret W., A.B., S.M.	Canton, N. Y.
Bodeker, Margaret P., S.B.	Athens, Ga.
Brace, Russell F., A.B., M.D.	Aruba, Netherlands West Indies
Brower, John F., S.B. IN CHEM.ENGIN.	Battle Creek, Mich.
Brown, Brock R., M.D., B.SC. (Med.)	Trenton, Ont., Canada
Byrne, Edward G., M.D.	Pensacola, Fla.
Calabi, Ornella, B.SC., M.SC., S.M.	Chicago, Ill.
Cannon, Joseph E., PH.B., M.D.	Denver, Colo.
Cauley, Patricia E., A.B., ED.M.	Dorchester, Mass.
Chatfield, Judith R., S.B.	New York, N. Y.
Chelsky, Morris, M.D.	Regina, Sask., Canada
Creque, Darwin D., A.B., A.M.	Charlotte Amalie, St. Thomas, Virgin Islands
Dan, Phan H., M.D., M.P.H.	Saigon, Vietnam
Daniels, Victor S., D.D.S.	Santiago, Chile
Dizon, Jacinto J., M.D.	Manila, Philippines
Dorion, M. Marcèle, A.B., M.D.	Quebec, P.Q., Canada
Dreyfus, Edward G., A.B., M.D.	Boston, Mass.
Fattah, Mohammed A., M.D., PH.D.	Basra, Iraq
Flores, Wilfredo, M.D.	Lima, Peru
Forsyth, Bruce D., D.D.S.	Wellesley, Mass.
Gallup, Samuel C., S.B., M.D.	Defiance, Ohio
Gayler, Gilbert E., A.B., M.D.	Wellesley Hills, Mass.
Gerald, Alfred N., A.B., M.D.	Panama City, Panama
Gupta, Om P., B.SC., B.D.S.	Delhi, India
Heald, Frances M., A.B., S.B., S.M.	Melrose, Mass.
Huxley, Matthew, A.B.	New York, N. Y.
Icaza, Susana J.	Panama City, Panama
Jalili, Mahmoud A., M.B.,CH.B., D.M., M.R.C.P.	Baghdad, Iraq
Johnson, Mary Louis, A.B., S.M., S.M. IN HYG.	Seattle, Wash.
Jones, Meredith L., S.B.	Clinton, Mich.

Walkley, Janet E., S.B.	Medford, Mass.
Zahl, Samuel, S.B., S.M.	Cambridge, Mass.

DEGREES

On June 11, 1953, the following degrees were conferred:

Doctor of Public Health

Audrey Allerton Bill, A.B. (*Wellesley Coll.*) 1937, M.D. (*Boston Univ.*) 1941, M.P.H. (*Mass. Institute of Technology*) 1943, M.P.H. (*Harvard Univ.*) 1947
Thesis: An Evaluation of the Number and Distribution of Hospital Facilities for Children and Newborn in Massachusetts
Special Field: Maternal and Child Health

Doctor of Science in Hygiene

Barbara Jane Rosenau, A.B. (*Wheaton Coll.*) 1944, M.S.P.H. (*Univ. of North Carolina*) 1946.
Thesis: Treatment and Immune Reactions of Experimental Yaws in The Hamster
Special Field: Tropical Public Health

Master of Public Health, *Magna cum Laude*

Samuel Dennis Bell, Jr., A.B. (*Princeton Univ.*) 1943, M.D. (*Columbia Univ.*) 1945.
John Philip Craig, M.D. (*Western Reserve Univ.*) 1947
Emanuel Eylan, M.Sc. (*Hebrew Univ.*) 1940, PH.D. (*ibid.*) 1945, M.D. (*Univ. of Geneva*) 1950

Master of Public Health, *cum Laude*

Helen Dorothy Cohn
Phan Huy Dan, M.D. (*Univ. of Paris, Sorbonne*) 1949
Geoffrey Mathews Martin, A.B. (*Univ. of North Carolina*) 1938, M.D. (*Tulane Univ.*) 1943.
Walter W. Melvin, Jr., M.D. (*Univ. of Colorado*) 1949
Ira Lee Myers, S.B. (*Howard Coll.*) 1945, M.D. (*Med. Coll. of Alabama*) 1949
Robert Neil Philip, M.D. (*Univ. of California*) 1948
Trawick Hamilton Stubbs, S.B. (*Emory Univ.*) 1931, S.M. (*ibid.*) 1932, M.D. (*ibid.*) 1940
Abelardo Temoche, M.B., M.D. (*Universidad Nacional Mayor de San Marcos, Peru*) 1949
Robert Peter Whalen, M.D. (*Albany Medical Coll.*) 1951

Master of Public Health

Azmi Bozkurt Ari, M.D. (*Istanbul Univ.*) 1945
Akhtar Hussain Awan, M.B.,B.S. (*Panjab Univ.*) 1943

Frank Lusk Babbott, Jr., A.B. (*Amherst Coll.*) 1947, M.D. (*State Univ. of New York*) 1951
Philip Gladstone Barrow, M.B.,CH.B. (*Univ. of Edinburgh*) 1934, D.P.H. (*ibid.*) 1937, D.T.M. (*Univ. of Liverpool*) 1937
Chote Buranakarl, M.D. (*Univ. of Medical Sciences, Thailand*) 1949
David Alfred Clarke, B.SC. (*McMaster Univ.*) 1943, M.D. (*Univ. of Western Ontario*) 1950
Lloyd William Coe, S.B. (*Midland Coll.*) 1932
Horace Bernard Colford, A.B. (*St. Mary's Coll.*) 1938, M.D. (*Dalhousie Univ.*) 1951
William Henry Cope, A.B. (*Ohio State Univ.*) 1944, M.D. (*ibid.*) 1947
Frederick Albert Dunham, M.D. (*Tufts Medical Coll.*) 1932
Ruth Miriam Farrisey, S.B. (*Simmons Coll.*) 1948
Katharine Elizabeth Fitzgerald, S.B. (*Boston Univ.*) 1947
Harald Frederiksen, M.D. (*Univ. of Vienna*) 1948
Arturo Gallo, M.D. (*Univ. of Chile*) 1946
Holger Lennart Hultin, M.D. (*Univ. of Helsinki*) 1946
Dorothy Nilan Kelly, S.B. (*Wayne Univ.*) 1947
Nicholas George Kitson, S.B. (*Tufts Coll.*) 1933
Shaul Kochwa, M.SC. (*Hebrew Univ.*) 1940, PH.D. (*ibid.*) 1943
Wee Tin Kyee, M.B.,B.S. (*Univ. of Rangoon*) 1934
John Douglas Lawson, M.D. (*Univ. of Tennessee*) 1948
Edward Burket Lehmann, A.B. (*Univ. of Pittsburgh*) 1942, M.D. (*Loyola Univ.*) 1946
Morris London, A.B. (*Harvard Univ.*) 1946, ED.M. (*Boston Univ.*) 1951
Rosemary McCann MacIsaacs, S.B. (*Boston Univ.*) 1948
Raul A. Ortega, M.D. (*Univ. of Chile*) 1929
Chia-tung Pan, B.SC. (*Tokyo Jikeikai Pre. Medical Coll.*) 1943, M.D. (*Tokyo Jikeikai Medical Coll.*) 1947
Robert Holland Quinn, S.B. (*St. Peter's Coll.*) 1941, M.D. (*Marquette Univ.*) 1949
Conrado C Ristori, M.D. (*Univ. of Chile*) 1939
Samuel Straughan Shouse, A.B. (*Univ. of Kentucky*) 1923, M.D. (*Harvard Univ.*) 1927
Ralph Coyner Singer, A.B. (*Indiana Univ.*) 1942, M.D. (*ibid.*) 1944
Deena Sonna, L.M.P. (*Vellore Medical Coll.*) 1936
Veronica Carroll Sullivan, S.B. (*St. John's Univ.*) 1951
Albert Andrew Taylor, S.B., D.V.M. (*Washington State Coll.*) 1937
Luiz Augusto Monteiro Toledo, M.D. (*Univ. of São Paulo*) 1939
Hampton Hill Trayner, S.B. (*Univ. of Chicago*) 1940, M.D. (*ibid.*) 1942
Isabelle Valadian, M.D. (*Faculté Française de Médecine, Lebanon*) 1946
Martin Vázquez, M.D. (*National Univ. of Buenos Aires*) 1946
Ester Maria Virkkunen, M.D. (*Univ. of Helsinki*) 1931

John Benjamin Wyon, B.A. (*Univ. of Cambridge*) 1940, M.B.,B.CH. (*ibid.*) 1942, M.R.C.P. (*London*) 1947
Aino Sofia Yliruokanen, M.D. (*Univ. of Helsinki*) 1938
Grujica Žarković, M.D. (*Medical Faculty of Zagreb, Yugoslavia*) 1939

Master of Industrial Health

Frank DeNiord Brent, M.D. (*Univ. of Western Ontario*) 1938
Milan R. Mateyka, M.D. (*Baylor Univ.*) 1950
Jerrold Jules Schwartz, A.B. (*Columbia Univ.*) 1944, M.B. (*Chicago Medical School*) 1951, M.D. (*ibid.*) 1952
Byron Kent Wilson, S.B. (*Univ. of Utah*) 1948, M.D. (*ibid.*) 1951

Master of Science in Hygiene

(IN THE FIELD OF BIOSTATISTICS)

Ahmed Ebada Sarhan, B.SC. (*Fouad I Univ.*) 1943, M.SC. (*Univ. of Liverpool*) 1952

(IN THE FIELD OF EPIDEMIOLOGY)

Nazir Ahmad, M.B.,B.S. (*Panjab Univ.*) 1939, D.P.H. (*ibid.*) 1950
Brian MacMahon, M.R.C.S., L.R.C.P. (*London*) 1946, M.B.,CH.B. (*Univ. of Birmingham*) 1949, D.P.H. (*ibid.*) 1949, PH.D. (*ibid.*) 1952

(IN THE FIELD OF INDUSTRIAL HYGIENE)

Richard Donald Coleman, S.B. IN C.E. (*Purdue Univ.*) 1948, S.M. (*Univ. of California*) 1949
Richard Evans Cunningham, A.B. (*Washington and Jefferson Coll.*) 1951
George John Cvejanovich, S.B. (*Univ. of Illinois*) 1948
Bryan Hugh Harvey, B.A. (*Univ. of Oxford*) 1936, M.A. (*ibid.*) 1945
Allen Reid Jones, S.B. IN CHEM.ENGIN. (*Univ. of Wisconsin*) 1943
James Edward Turner, A.B. (*Emory Univ.*) 1951

(IN THE FIELD OF MATERNAL & CHILD NUTRITION)

Mary Louise Johnson, A.B. (*Hardin-Simmons Univ.*) 1940, S.M. (*Univ. of Wisconsin*) 1942

(IN THE FIELD OF NUTRITION)

Anna Sophia van den Berg, B.SC. (*Univ. of Pretoria*) 1949

(IN THE FIELD OF PUBLIC HEALTH PRACTICE)

Chaitanya Nath Hazarika, M.B. (*Univ. of Calcutta*) 1944

(IN THE FIELD OF TROPICAL PUBLIC HEALTH)

William Edmund Burgoyne, S.B. (*St. John's Coll.*) 1949, S.M. (*ibid.*) 1951

On March 8, 1954 the following degrees were conferred:

Doctor of Science in Hygiene

Ruth Lois Huenemann, s.b. (*Univ. of Wisconsin*) 1938, s.m. (*Univ. of Chicago*) 1941
Thesis: The Nutrition and Care of Peruvian Children from Birth to Three Years of Age
Special Field: Nutrition

Master of Public Health, *cum Laude*

David Minard, s.b. (*Univ. of Chicago*) 1935, ph.d. (*ibid.*) 1937, m.d. (*ibid.*) 1943

Master of Public Health

Thomas Robert Alexander Harries Davis, m.b.,ch.b. (*Univ. of New Zealand*) 1945, d.t.m. & h. (*Univ. of Sydney*) 1950
Margaret Elizabeth Drolette, a.b. (*Radcliffe Coll.*) 1947
Arthur James Kavanagh, Jr., s.b. (*Boston Coll.*) 1949, s.m. (*Univ. of Mass.*) 1950
Tadao Miyasaka, m.d. (*Univ. of Tokyo*) 1946
S. Steven Rosner, s.b. (*Temple Univ.*) 1938

Master of Science in Hygiene

(in the field of microbiology)

Young Bok Moon, a.b. (*Union Christian Coll., Korea*) 1929

FALL TERM — FIRST PERIOD (September 27 to November 20, 1954)

Course	*Credit Units*
Public Health	
1a Ecology: Biological and Social *	3
Biostatistics	
1a, b Principles of Biostatistics *	2 (4) †
Epidemiology	
3a Clinical Infectious Diseases	.5
15a, b Advanced Epidemiology	1–2 (2–4)
Industrial Hygiene	
2a, b Industrial Air Analysis	2 (4)
Maternal and Child Health	
1a, b Basic Problems	2 (4)
Microbiology	
1a, b Principles of Bacteriology and Immunology	1 (2)
12a Biological Products in Public Health	1
Nutrition	
1a Public Health Nutrition	1.5
6a Nutrition Seminar	.5
Physiology	
1a, b Human Physiology and Its Application to Public Health	1 (2)
Public Health Practice	
4a Control of Cancer	2
5a Control of Tuberculosis	2
Sanitary Engineering	
1a, b Principles of Sanitation **	2 (4)

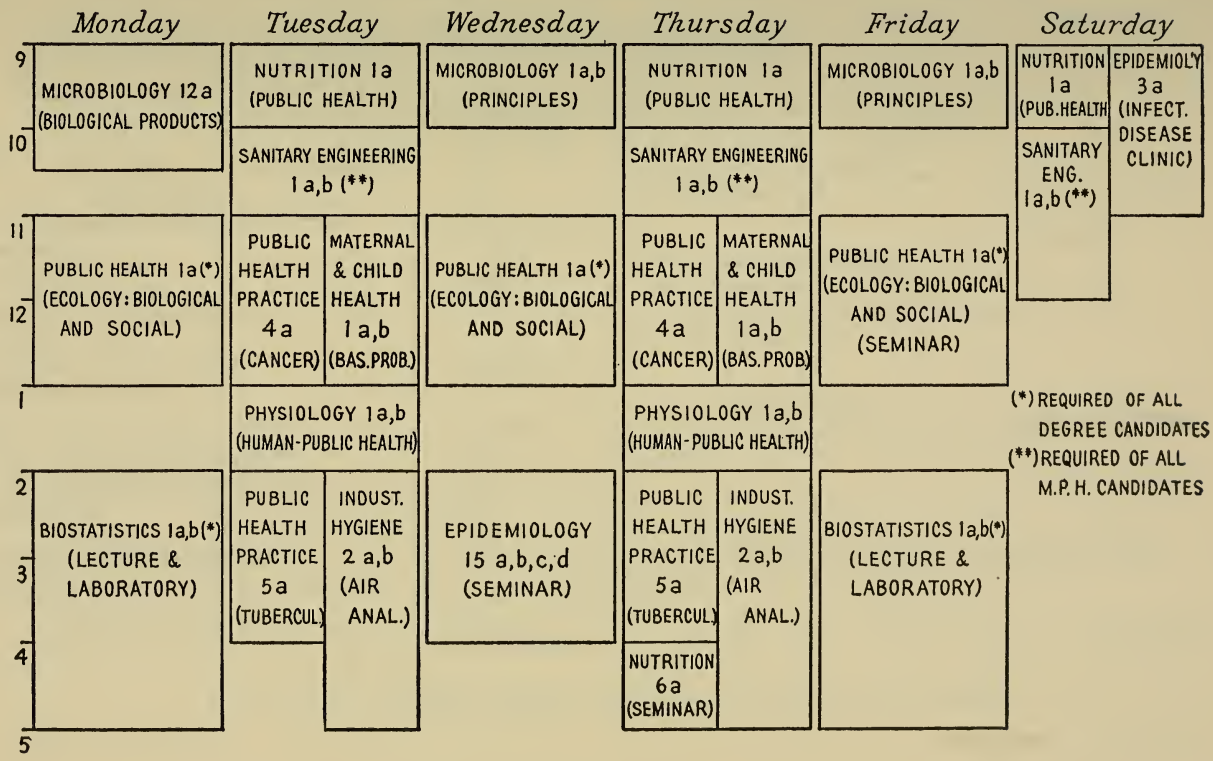
Unscheduled courses: Microbiology 15a,b; Sanitary Bacteriology 2a,b. (See Department for description)

* Required of all degree candidates

** Required of all M.P.H. candidates

† Figures in parentheses are units for entire course, if this runs longer than one period

Fall Term--First Period *September 27 to November 20, 1954*



FALL TERM — SECOND PERIOD (November 22, 1954 to January 29, 1955)

Course	Credit Units
Biostatistics	
1a, b Principles of Biostatistics *	2(4) †
Epidemiology	
1b Principles of Epidemiology *	2.5
3b Clinical Infectious Diseases	.5
15a, b Advanced Epidemiology	1–2(2–4)
Industrial Hygiene	
2a, b Industrial Air Analysis	2(4)
Maternal and Child Health	
1a, b Basic Problems	2(4)
Microbiology	
1a, b Principles of Bacteriology and Immunology	1(2)
11b Public Health Laboratory Procedures	3
Nutrition	
2b, c Biochemistry and Physiology of Nutrition	2(4.5)
6b Nutrition Seminar	.5
Physiology	
1a, b Human Physiology and Its Application to Public Health	1(2)
Public Health Practice	
1b Principles of Public Health Practice **	3
2b Organization of Medical Care	2
3b Psychosocial Problems	1
Sanitary Engineering	
1a, b Principles of Sanitation **	2(4)

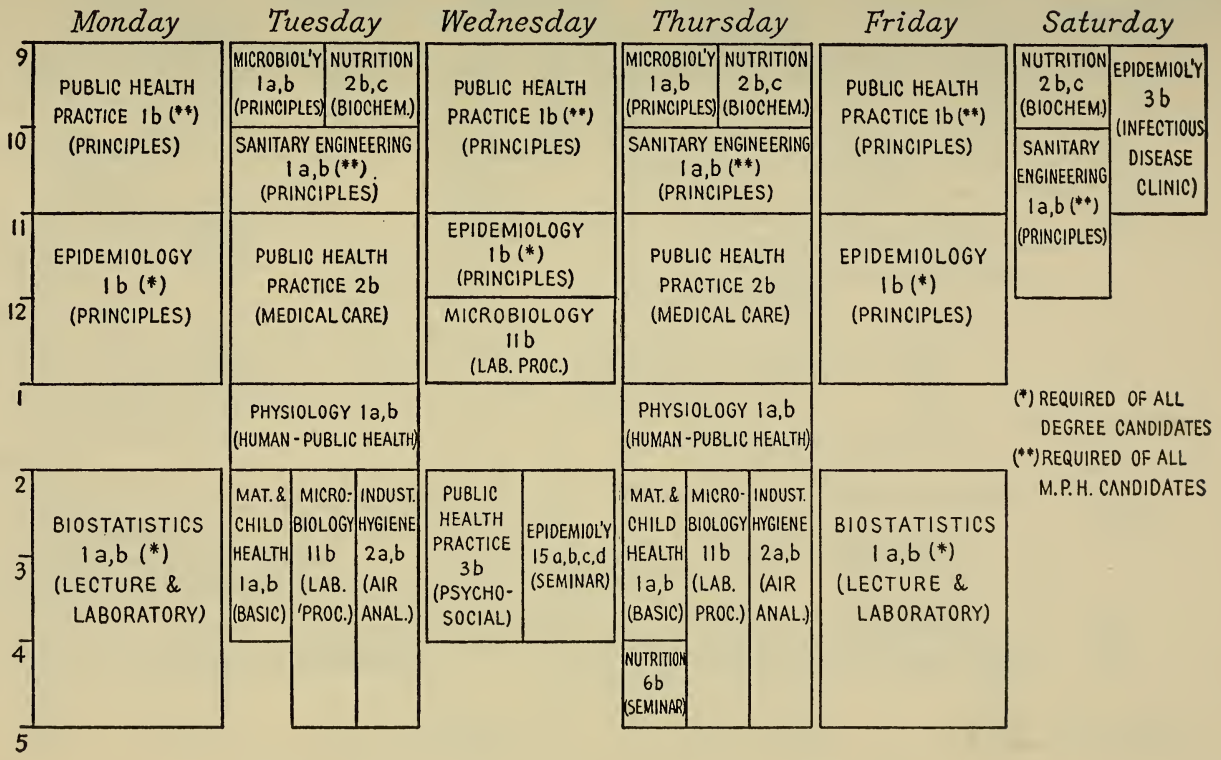
Unscheduled courses: Microbiology 15a,b; P.H. Practice 32b; Sanitary Bacteriology 2a,b. (See Department for description)

* Required of all degree candidates

** Required of all M.P.H. candidates

† Figures in parentheses are units for entire course, if this runs longer than one period

Fall Term -- Second Period *November 22, 1954, to January 29, 1955*



(*) REQUIRED OF ALL DEGREE CANDIDATES

(**) REQUIRED OF ALL M.P.H. CANDIDATES

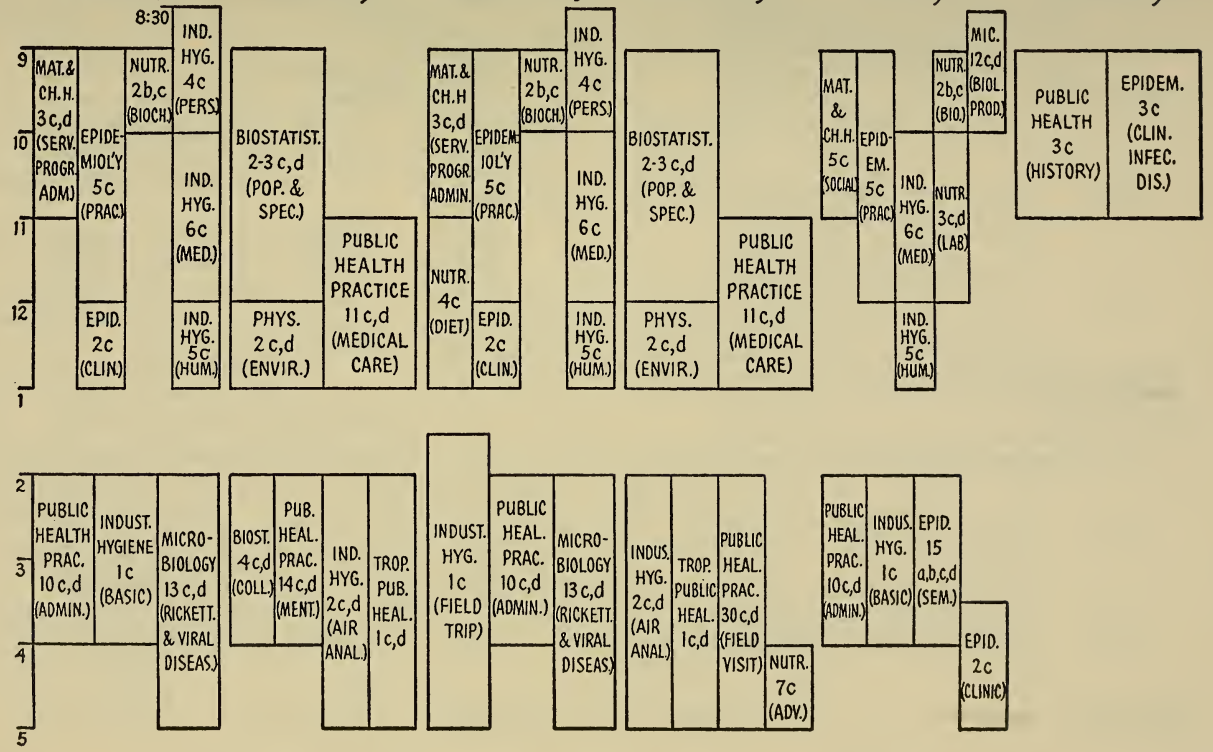
SPRING TERM — THIRD PERIOD (February 7 to April 2, 1955)

Course		*Credit Units*
Public Health		
3c	History and Philosophy of Public Health	1
Biostatistics		
2c, d	Analysis of Population Data	2(3)†
3c, d	Analysis of Data Resulting from Special Studies	2(3)
4c, d	Collection and Use of Population Data	1(2)
Epidemiology		
2c	Clinical Epidemiology	1.5
3c	Clinical Infectious Diseases	.5
5c	Practice of Epidemiology	3
15c, d	Advanced Epidemiology	2–3(4–6)
Industrial Hygiene		
1c	Basic Problems	3
2c, d	Industrial Air Analysis	2(4)
4c	Personnel Administration	1.5
5c	Human Problems of Adjustment in Industry	1.5
6c	Industrial Medicine	3
Maternal and Child Health		
3c, 3d	Services, Programs and Administration	2(4)
5c	Social Problems and Available Social Services for Children	1
Microbiology		
12c, d	Biological Products in Public Health	1(2)
13c, d	Rickettsial and Viral Diseases	3(6)
Nutrition		
2b, c	Biochemistry and Physiology of Nutrition	2.5(4.5)
3c, d	The Laboratory Basis of Nutrition	1(2)
4c	Dietary Evaluation	1
7c	Advanced Topics in Nutrition	.5
Physiology		
2c, d	Environmental Physiology	1(2)
Public Health Practice		
10c, d	Public Health Administration, Health Education, Public Health Nursing and Social Work	3(6)
11c, d	Administration of Medical-Care Programs	2(4.5)
14c, d	Mental Health Problems	1(2)
30c, d	Field Study in Administration	(1.5)
Tropical Public Health		
1c, d	Conservation of Health in Tropical Countries	2.5(5)

Unscheduled courses: Biostat. 5c,d; Ind. Hyg. 3c,d; Microb. 2c,d; 15c,d; P.H.P. 7c,d; 15c,d; 32c; 40c,d; 41c,d; 42c,d; San. Eng. 3c,d; T.P.H. 5c,d. (See Department for description)

† Figures in parentheses are units for entire course, if this runs longer than one period.

Spring Term --Third Period *February 7 to April 2, 1955*



SPRING TERM — FOURTH PERIOD (April 11 to June 4, 1955)

Course	Credit Units
Biostatistics	
2c, d Analysis of Population Data	1(3)†
3c, d Analysis of Data Resulting from Special Studies	1(3)
4c, d Collection and Use of Population Data	1(2)
Epidemiology	
3d Clinical Infectious Diseases	.5
7d Non-Infective Mass Disease and Injury	2
8d Quantitative Method in Epidemiology	1
9d Military Preventive Medicine	1
15c, d Advanced Epidemiology	2–3(4–6)
Industrial Hygiene	
2c, d Industrial Air Analysis	2(4)
7d Industrial Hygiene Engineering	3
8d Hygienic Aspects of Ventilation	1.5
Maternal and Child Health	
3c, 3d Services, Programs and Administration	2(4)
6d Maternal and Child Nutrition	1
7d Physical Growth and Development	1
8d Recent Advances in Obstetrical Care	1
Microbiology	
13c, d Rickettsial and Viral Diseases	3(6)
Nutrition	
3c, d The Laboratory Basis of Nutrition	1(2)
5d Human Nutritional Disease	1.5
7d Advanced Topics in Nutrition	.5
Physiology	
2c, d Environmental Physiology	1(2)
Public Health Practice	
10c, d Public Health Administration, Health Education, Public Health Nursing and Social Work	3(6)
11c, d Administration of Medical-Care Programs	2.5(4.5)
13d Hospital Organization and Community Relationships	2
14c, d Mental Health Problems	1(2)
16d Control of Communicable Disease (with Epidemiology 6d)	1
18d Community Organization for Disaster	.5
30c, d Field Study in Administration	(1.5)
Tropical Public Health	
1c, d Conservation of Health in Tropical Countries	2.5(5)
2d Administration of Tropical Public Health Programs (with P.H.P. 17d)	1
4d International Aspects of Tropical Public Health	1

Unscheduled courses: Biostat. 5c,d; Ind. Hyg. 3c,d; 40d; 41d; Microb. 2c,d; 12c,d; 15c,d; P.H.P. 7c,d; 8d; 15c,d; 32d; 40c,d; 41c,d; 42c,d; San. Eng. 3c,d; T.H.P. 5c,d; 40d. (See Department for description)

† Figures in parentheses are units for entire course, if this runs longer than one period.

CALENDAR FOR THE ACADEMIC YEAR 1954–1955

September 20, Monday to	
September 24, Friday	Registration of students

Fall Term, September 27, 1954 to February 1, 1955

September 27, Monday	First Period begins
October 12, Tuesday	Columbus Day: a holiday
November 11, Thursday	Armistice Day: a holiday
November 20, Saturday	First Period ends
November 22, Monday	Second Period begins
November 25, Thursday	Thanksgiving Day: a holiday

Recess from Sunday, December 19, 1954 to Sunday, January 2, 1955 inclusive

January 29, Saturday	Second Period classes end
January 31, Monday to	
February 5, Saturday	Field Work

Spring Term, February 2, 1955 to June 16, 1955

February 2, Wednesday	Registration of new students
February 7, Monday	Third Period classes begin
February 22, Tuesday	Washington's Birthday: a holiday
April 2, Saturday	Third Period ends

Recess from April 3 to April 10, 1955 inclusive

April 4, Monday to	
April 9, Saturday	Field Work
April 11, Monday	Fourth Period begins
April 19, Tuesday	Patriot's Day: a holiday
May 30, Monday	Memorial Day: a holiday
June 4, Saturday	Fourth Period classes end
June 6, Monday	Comprehensive examination
June 16, Thursday	Commencement
